Introduction

The circular economy

“Thanks to the contribution made by your company, we can invest in a local, circular economy and we guarantee a sustainable recycling solution of all packaging put on the market.”

Since the end of last year, everyone in Belgium has been able to sort their packaging in the New Blue Bag. This means that we can now collect more packaging than ever, including virtually all plastic packaging. What is more, we collect it from people at home, so everyone can easily take part in the system.

Rather less visible but at least as important is the construction of a totally new infrastructure to sort and recycle all this packaging. The five new sorting centres, specifically equipped to sort the New Blue Bag, are now fully operational.

In addition, we are attracting investments in new recycling capacity for plastic packaging. A total of five new recycling centres are in the pipeline, two of which are already

running at full capacity. And all this is here in Belgium – so we are also doing our bit for our local economy.

The ultimate aim is very clear: a sustainable recycling solution for all packaging that is put on the market. Including that from your company. This way, we not only help you meet the increasingly stringent legal goals, but we also reduce your company's total footprint.

The annual declaration is an important step in this process. When you declare your packaging correctly, we gain an accurate picture of all the packaging that is put on the market and we make sure that your contribution is always in line with the actual costs. This document is designed to help you on your way.

Practical information

Which declaration is right for your company?

Depending on your activity, sector and number of units put on the market, various types of declaration are available in MyFost:

1. Detailed declaration

- **Declaration per base unit**

2. Sectoral declaration types

- **Declaration per packaging material**
 - service packaging
 - parcel packaging
- **Declaration per type of packaging**
 - wine
 - pharma (pharmaceutical products)
 - e-commerce (+10 % supplement)
 - carrier bags

3. Simplified declaration types

- **Fixed-price declaration** (+ 15 % surcharge) - **declaration per product family**
- **Turnover declaration**
- **Total market declaration**

When do you submit your declaration?

The deadline for the annual declaration is always 28 February for the packaging that you put on the market the previous year. In other words, you submit the declaration for the packaging that you put on the market in 2023 by 28 February 2024 at the latest.

Be sure to submit your declaration on time! Otherwise, you risk a fine amounting to 1 % of the contribution from your previous declaration per month of delay.

You can correct your declaration until the 30th of June at the latest. After that, only a request for correction can be submitted. Fost Plus then evaluates the admissibility of each request for correction of declaration and, if accepted, will recalculate the contribution that is due.

Invoicing

You receive one or more interim invoices during the course of the year. We calculate the amount of this interim invoice on the basis of your most recently processed declaration. Once you have submitted your declaration, we prepare a final statement on the basis of the packaging that you have actually put on the market and we draw up an additional invoice or a credit note for the difference between the contribution you have actually made and the total of the interim invoices.

Need help with your declaration?

- The in-app guidance in MyFost can provide assistance
- Watch the video tutorials in Help & FAQ on MyFost.
- Contact **Customer Service** or your account manager.

02

Packaging Responsibility

When is your company responsible for packaging?

The following companies are considered to be responsible for packaging:

- Producers of packaged products (VV/A). Companies that package household products or have such products packaged in Belgium in order to put them on the market under their own brand name or under a neutral brand.
- Importers and distributors of packaged products (VV/B). Companies that import packaged household products or have such products imported in order to put them on the Belgian market.
- Importers of packaged products for their own use (VV/C)

- Producers and importers of service packaging (VV/D). Companies that produce or import service packaging in order to put it on the Belgian market. Service packaging is applied in the place where products or services are offered to consumers. Examples include wrapping paper, bread bags, pizza boxes and checkout bags.

If your company puts **less than 300 kg of packaging** – household and industrial combined – on the market per year, you only have to join Fost Plus if you wish to use the Green Dot logo.

If your company puts packaged products on the market **online or via e-commerce**, you are also considered to be responsible for packaging.

The specific assessment criteria for e-commerce companies can be found later in this document.

What does this responsibility involve?

Companies that fall within the category of parties responsible for packaging have to fulfil three legal obligations:

Take-back obligation

Every year, companies have to achieve a set recycling percentage for the packaging that they put on the market.

Information obligation

Companies have to inform the Interregional Packaging Commission (IRPC) of the nature of their packaging and the recycling percentages that they have achieved.

Three-year prevention plan

Companies have to draw up a prevention plan setting out the measures that they are taking to reduce their quantity of packaging and the goals that they aim to achieve. This obligation applies for companies that put at least 300 tonnes of one-way packaging on the market annually and for companies that package products or have products packaged in Belgium with at least 100 tonnes of one-way packaging per year. Companies can draw up this prevention plan themselves or use the prevention plans of the federations.

You can indicate under 'Sectoral Prevention Plan' that the packaging data from your declaration may be integrated into the overall sector report. However, you do need to have concluded an agreement with your sectoral organization in order to participate in the sectoral prevention plan.

How can you fulfil your legal obligations?

Become a Fost Plus member

If you become a member of Fost Plus, we deal with the take-back and information obligations as regards your household packaging for you. You then pay an annual membership contribution which Fost Plus uses to fund the collection, sorting and recycling of your household packaging.

Fost Plus is only competent for household packaging. For industrial packaging, you can contact Valipac. If you put both household and industrial packaging on the market, you need to join both organisations. For packaging that you put on the market in other countries, you should contact the European organisations EXPRA and PRO-EUROPE.

For the prevention plan, you can contact your professional federation and the Interregional Packaging Commission. You can draw up your prevention plan yourself or you can join a sector prevention plan.

You set up your own system

You are not obliged by law to become a member of Fost Plus. You can also opt to set up your own system. In that case, you organise the collection, sorting and recycling of your packaging yourself and send the necessary data to the Interregional Packaging Commission (IRPC) to prove that you achieve the required recycling percentages.

You let another company take over (part of) your declaration

In certain cases, you can let another company take over (part of) your declaration. You can do so, for example, when your company falls under the legal take-back and information obligations but does not have access to the necessary information to fulfil these obligations. In practical terms, you then give the other company a mandate to take care of (part of) your declaration.

You will find all the information about the mandates in [chapter 5](#).

03

Which packaging
do you declare
to Fost Plus

Every year, you have to submit a declaration to Fost Plus for all the household packaging that your company puts on the market. This chapter contains all the information about the various types of packaging that you can declare to Fost Plus.

Packaging or not?

What do we mean by packaging?

It is usually clear whether an element around a product is packaging or not. Clear examples of packaging include bottles, butter tubs, cans and drinks cartons. After all, their sole function is to package the product.

In some cases, packaging can have one or more additional functions or be used for a different purpose afterwards, such as a mustard jar, a lipstick holder or a coat hanger.

Together with the Interregional Packaging Commission (IRPC), Fost Plus has drawn up a list of packaging that often causes doubts. The list is provided in the **annexes** to this document.

Which packaging?

Household or industrial?

What do we mean by household packaging?

Products and their packaging are either household or industrial. They can never be both at the same time. But how do you make the distinction?

Definitions

Household packaging waste is packaging waste resulting from the normal working of households. This packaging should be declared to Fost Plus, the accredited body for the management of household packaging waste.

Industrial packaging waste is any packaging waste that is not considered to come from households. This packaging should be declared to Valipac, the accredited body for the management of industrial packaging waste.

Application

In consultation with the Interregional Packaging Commission, certain rules were drawn up to identify the household or industrial origin of products. A product and its packaging is either household or industrial. It can never be both at the same time. To distinguish the origin of products and their packaging, the following rules apply:

- **Sales or primary packaging** means all packaging designed in such a way so that, for the final user or consumer at the point of sale one sales unit. Primary packaging is either household or industrial. To differentiate out, you should base yourself on the decision tree below.
- **Collective or secondary packaging:** any packaging that is so designed to be, at the point of sale a collection of a

number of sales units, whether or not they are sold as such to the final user or consumers, or serve only to restock shelves at the point of sale; this packaging may be removed from the product without affecting its characteristics. Secondary packaging are always industrial, except the household multipack.

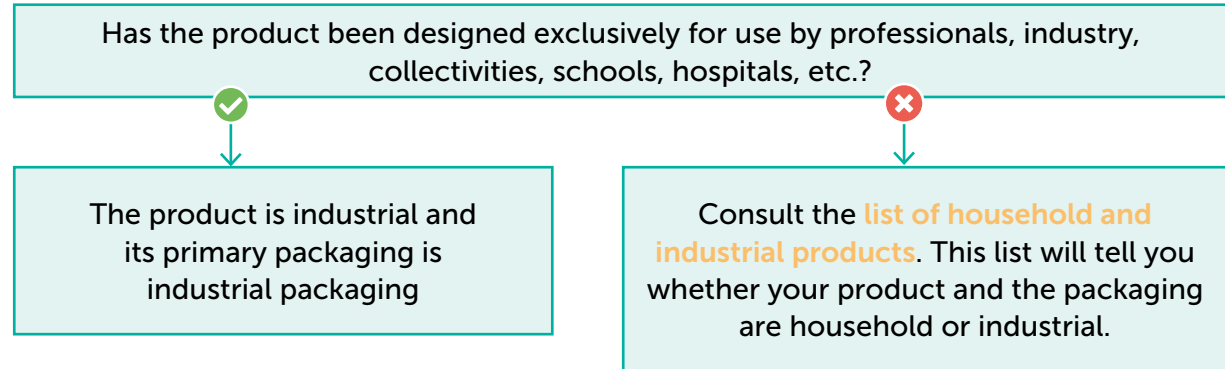

A multipack is a packaging that contains several individually packaged consumption units and intended to be sold to the consumer. For more information, please consult the website of IRPC, Valipac or Fost Plus.

- **Shipping or tertiary packaging:** Any packaging designed that the loading and transport of a number of sales units or collective packaging, is facilitated in order to prevent physical damage by loading or transport. Road, rail, ship or aircraft containers are not considered as shipping packaging.

Tertiary packaging is always industrial, except household parcel packaging. A parcel packaging is a specific form of tertiary packaging that applies only to sales to private individuals in the context of sales by express courier, by mail order or via an internet purchase.

A package is any added packaging for sending products. The original primary packaging of the product is never considered as a parcel packaging. All transport/tertiary packaging in the context of sales of products to companies via express courier, by mail order or via an internet purchase are industrial packaging.

- **Service packaging** means all packaging used at the point of provision of goods or services to the consumer. Service packaging is usually fitted only at the point of sale to the consumer and are applicable only in the domain of household packaging. For more information, consult the website of IRPC, Valipac or Fost Plus.
- The grey list (list of household and industrial products) applies exclusively applicable to products with single use packaging.

Important notes:

⁽¹⁾ If an identical product to yours is distributed by competitors through distribution networks to individuals, you should consult the list below.

The distribution network is thus not a determining fact, unless you can clearly and concretely prove that the product is industrial.

⁽²⁾ Where the primary packaging of a product is composed in such a way that the use of the product always requires a professional device, then the primary packaging of that product is considered to

be an industrial packaging. For example: a beer keg which must be connected to a professional draught beer installation.

Content and weight

In many cases, content and weight also play a role in determining whether the product and packaging are household or industrial.

Fost Plus and Valipac have drawn up a list of products that may cause doubts, specifying which category they belong to. The list is provided in the **annexes** to this document.

Here are a number of examples:

- Primary drinks packaging with a content of less than 20 litres is considered to be household packaging. If it contains more than 20 litres, it is industrial.
- Primary packaging for mayonnaise that contains 1.2 kg of mayonnaise or less is household. If the packaging contains more than 1.2 kg, then it is industrial.
- Primary packaging of rice that contains 5 kg of rice or less is household. If it contains more than 5 kg, then it is industrial.
- Consult the **complete list of packaging** that could give rise to doubt.

Parts and accessories

Parts are always industrial products. After all, they are used for product repairs that are usually carried out by specialists.

Accessories for a product complement a product and therefore belong to the same category as the main product.

For example:

- PC = **industrial**
 - accessories for the PC:
mouse = industrial
 - component for the PC:
motherboard = industrial
- Bicycle = **household**
 - accessory for the bicycle:
quick release strap = household
 - part for the bicycle:
brake = industrial

Reusable packaging

Reusable packaging is a type of packaging intended and designed to be reused a minimum number of times during its useful life. This means that it can be refilled or used again for the same purpose. The packaging must meet certain technical requirements and be included in a system that enables reuse.

Here are a number of examples:

- drinks bottles for which a deposit is paid
- reusable checkout bags

Which packaging?

How do you declare reusable packaging?

When it comes to reusable packaging, only the information obligation applies. This means that you have to include all reusable packaging in your declaration, but you do not pay a contribution for this packaging. If you only declare reusable packaging – and therefore no one-way packaging – to Fost Plus, you do, however, pay the required minimum contribution every year in accordance with our general terms and conditions.

You can declare your packaging in the detailed declaration per base unit or use the declaration per product family. In your annual declaration, you declare all reusable packaging that you have put on the market in the past year. All elements that are part of the reusable packaging are considered to be reusable. So you should also declare the label and the crown cap as reusable.

Proportion of new reusable packaging

In addition, you estimate the proportion of 'new' packaging that you have used for the first time in the past year, for example because you put a new type of bottle on the market or because there are insufficient used bottles in circulation.

For example:

In the previous year's declaration, you declared 1,000 water bottles and 1,000 beer bottles. Of these, you used 50 water bottles and 100 beer bottles for the first time. So for the water bottles you enter 5 % (50 out of a total of 1,000) and for the beer bottles, the figure is 10 % (100 new bottles out of a total of 1,000).

Reusable packaging in Multipacks

In certain cases, you combine a reusable packaging with a one-way packaging. This is the case, for example, for beer bottles with a deposit (reusable) which are packed together in a plastic wrapper (one-way). In that case, you enter the weight of the reusable packaging under 'reusable' and that of the one-way packaging under 'Multipack'.

For example:

You prepare a packaging sheet for six reusable beer bottles packed in a plastic wrapper. You enter the weight of the bottles, the labels and the crown caps under 'reusable'. The weight of the plastic wrapper should be entered as 'Multipack'. A contribution is only charged for the weight indicated as 'Multipack'.

Specific single use packaging

Multipacks

A Multipack is a type of household packaging that combines several individually packed consumer units and is intended to be sold in this way to the consumer. The consumer can remove this collective packaging without affecting the properties of the individual products. In most cases, the individually packed products are also sold to consumers separately.

To determine whether collective packaging is a household Multipack (to be declared to Fost Plus) or industrial secondary packaging (to be declared to Valipac), a number of rules have been drawn up, including specific criteria for drinks, sweets, other consumable products and non-consumable products.

How do you declare Multipacks?

You can declare your Multipacks via the declaration per base unit. When drawing up a packaging sheet, you indicate the material category and the weight under Multipack.

Full details are provided in the [annex](#) to this document.

A few examples:

- A pack with six bottles of soft drinks in a plastic outer wrapping
- Two spray cans of shaving foam in plastic film
- A 500-g packet of individually wrapped biscuits
- Three bags of crisps packed together with plastic film around them
- Six cans of vegetables + two free cans with a plastic wrapper around them, packed together as a special offer.

Which packaging?

Service packaging

Service packaging is packaging that is used to offer goods or services to the consumer. This packaging is usually only applied at the moment when the product is sold to the consumer.

Examples of service packaging include bread bags, wrapping paper, pizza boxes, processed meat pots, checkout bags, disposable cups, etc.

Who is responsible for the packaging?

Companies that produce service packaging in Belgium or import it into the country are by law responsible for the packaging. They have to fulfil both the information obligation and the take-back obligation.

There are various ways of doing this:

- You can declare all your service packaging yourself.
- You can have your customers declare all service packaging.
- You can declare part of your service packaging yourself while your customers deal with the other part.

Legal liability always remains with the producers and importers of service packaging. Even when you transfer (part of) your obligations, in the event of an official inspection you have to be able to demonstrate that you fulfil your take-back and information duty.

How do you declare service packaging?

Service packaging can be declared to Fost Plus in two ways.

- Via the declaration per base unit: you prepare a sheet for each packaging (unit) giving the precise composition and the weight of the packaging.
- Via the simplified declaration for service packaging. From declaration 2022, plastic carrier bags will have to be declared via the declaration of plastic carrier bags.

Full details of the declaration of your service packaging and information about issuing and accepting mandates can be found in the [annex](#).

Promotional articles

Promotional articles or giveaways are items or gadgets that companies give to (potential) customers, **with the intention of advertising**. The companies usually distribute them widely at trade fairs, at new product launches, at consumption in restaurants, cafes or hotels, at open days, etc. They are often printed with the brand or logo of the company offering the items.

A few examples of promotional articles are: a balloon; a lighter; gadgets: a calculator, a bottle opener, a cap, a notepad,

N.B.: These are not promotional offers where a product is offered for free or cheaper, such as 'three products + one free' or 'second product at half price',...

Commercial gifts

In the corporate world, companies offer free products for the purpose of **maintaining a commercial relationship**. These promotional gifts are often printed with the brand or logo of the company offering the items. They involve products of some value that fall outside the core business of the company itself.

Clothing, leather goods, a watch, a clock, a ballpoint pen, etc.

To determine who is responsible for packaging, a distinction is made between imported products and products that are packaged in Belgium.

IMPORTED PRODUCTS

The importer of packaged promotional articles and commercial gifts is always the responsible for packaging, even if he does not use the products himself as promotional articles or commercial gifts.

PRODUCTS PACKAGED IN BELGIUM

There is a distinction between **standard packaging** and **packaging tailored** to the customer.

Standard packaging

The company that packages promotional articles or commercial gifts in Belgium or has them packaged in standard packaging to market them on the Belgian market is responsible for packaging for these products, even if it does not use the products itself as promotional articles or commercial gifts.

Important:

Standard packaging is the packaging that the producer applies or has applied as standard.

Control over the choice of packaging lies with the producer. These are packaging that is available to all customers in the same form. The customer can optionally choose the colour and/or have a logo applied.

Customised packaging

Promotional articles and commercial gifts can also be packaged in customised packaging for one client, whereby the customer determines the composition, shape, colour and printing of the packaging. He also has his brand or logo applied to the packaging. In this case the owner of the brand or logo is the responsible for packaging.

You can use a fixed-price declaration or a detail declaration.

Household Hazardous Waste packaging (HHW)

Certain household packaging is put with the Household Hazardous Waste after use because it has contained toxic or harmful products. Members of the public may not put this packaging in the blue PMD bag, but should take it to the recycling park. It is then further processed in specialised centres.

What packaging is involved?

In practical terms, this is packaging that contains the following products:

- Paint, varnish and lacquer
- Adhesives and silicones
- Lubricants, fuels, motor oils and mineral oils
- Pesticides (herbicides, insecticides, fungicides, etc.)

The products should always be put with the Household Hazardous Waste, even when they comprise exclusively natural or organic ingredients.

In addition, the following packaging belongs in the HHW category:

- One-way gas cylinders
- Packaging with one of the GHS06 or GHS08 hazard symbols or a child-resistant closure.

N.B.: If you put a child-resistant closure on your packaging as a precaution without being obliged to do so by law, you should also declare your packaging as HHW. This only concerns a child-resistant closure (with a white top that has to be pressed down vertically). A safety top (that usually has to be pressed sideways before turning) is not a child-resistant closure.

HHW packaging	Example	Product family 2021	Packaging that is not HHW
Paint, varnish and lacquer	All paints, varnishes and lacquers, irrespective of their base	G2	Craft paint for children
Glues and silicones	Adhesives, PU foams, sealants...	G3	Children's glue, office glue, glue stick
Lubricants, fuels, motor oils and mineral oils	Anti-corrosion agents, degreasers, lubricants, penetrating oils...	C1	Salad and frying oils, vegetable oils
Pesticides and herbicides	herbicides, insecticides, fungicides, other biocides and plant protection products	F1	
Single-use gas cylinders	Gas cylinders for gas cookers or camping cookers, gas refill bottles <i>Attention:</i> The metal gas bottle itself is also packaging and must be declared!	F2	Whipped cream cartridges
Metal spray cans with the exception of cosmetics or food sprays	Paint aerosols, cleaning and maintenance products in an aerosol can, air fresheners	To be declared under the relevant product family and with code "001 aerosol" as packaging element	Deodorant
Presence of child-resistant closure Presence of 1 or 2 of the following CLP hazard symbols: GHS06 (toxic) or GHS08 (long-term health hazard)	White spirit, acetone, unblocker, ammonia... 	C1	Packaging with a safety closure or safety cap other than a child-resistant closure

How do you declare Household Hazardous Waste packaging?

In the detailed declaration per base unit, you select the Household Hazardous Waste fee type. You declare all packaging elements of the packaging that are taken to the recycling park as HHW. All packaging elements for which another selective collection method applies should be included in the material category.

For example:

- You declare a bottle of insecticide sold in a cardboard box. You declare all the elements of the bottle (including the lid and the label) as HHW. The cardboard box can be declared as 'disposable' because the consumer can sort the box with the paper and cardboard.

If packaging is obstructive or discouraged packaging that has to be put with the HHW after use, you should declare this as HHW and not as **obstructive or discouraged packaging**.

Which packaging?

Obstructive or discouraged packaging

Obstructive or discouraged packaging is packaging that seriously disrupts selective collection, sorting and/or recycling.

A dissuasive fee is applied to such packaging, which is twice as high as the next highest fee. The high fee is intended to encourage companies to avoid this packaging and replace it by recyclable and more sustainable alternatives as quickly as possible.

What is obstructive or discouraged packaging?

- D001 plastic can with metal base or top
- D005 oxo-degradable packaging
- D002 laminated plastic packaging with aluminium foil for beverages
- D003 laminated paperboard packaging of chips with plastic or metal uppers or bottoms
- D004 laminated paperboard packaging of milk powders with plastic or metallic underneath or on top
- D006 plastic bottles that are at least 70 % covered by a sleeve (or 50 % for

bottles <50cl), provided that it is made of a different material other than the bottle and is not perforated

- D007 laminated plastic packaging containing aluminium foil for fruit and vegetables
- D008 laminated plastic wrappings containing aluminium foil for aluminium foil for toiletries and body care
- D009 aluminium foil laminated plastic containers for aluminium foil for prepared meals
- D010 laminated plastic packages containing aluminium foil for pet food
- D011 laminated plastic packages containing aluminium foil for wine (bag in box)

Companies with the following packaging types D002, D003, D004, D006, D007, D008, D009, D010 and D011 have been granted an additional derogation, they will revert to the these packages back to the rate of the packaging materials concerned. All obstructive packaging must be included in the 'Obstructive Packaging' of the detailed declaration, regardless of whether they are exempt from the highest discouraged rate. In your packaging sheet under 'composition

select 'Obstructive packaging'. Then select the obstructive packaging type from the dropdown menu that appears under 'description of the basic unit'.

From declaration year 2024, a further 7 packaging types will be added as obstructive types. These new obstructive packaging do not yet have to be declared as such declared in the declaration of 2023, but we have already added these types in MyFost. That way you can already make preparations now for the 2024 declaration. To these new obstructive packaging types are not yet assigned a dissuasive rate for declaration year 2023. However, by now already making use of these types you ensure that your intermediary invoices for declaration year 2024 are calculated correctly and you can make accurate simulations.

The new obstructive packaging types are the following:

- D012 coloured plastic packaging with colours containing carbon black
- D013 biodegradable (or compostable) plastic packaging

Which packaging?

- D014 black glass bottles, colored in the mass
- D015 paper/cardboard packaging with a plastic coating on all sides (except beverage cartons - category 008)
- D016 paper bags laminated with aluminium inside for powdered sauces and soups
- D017 plastic/aluminium laminated packaging for coffee
- D018 plastic/aluminium laminated packaging for cereals

How do you declare obstructive or discouraged packaging?

All obstructive or discouraged packaging must be declared in the 'Obstructive or discouraged packaging' category, regardless of whether or not it is exempt from the highest dissuasive fee.

In the detailed declaration, you select the 'Obstructive or discouraged packaging' fee type. You then select the obstructive or discouraged type of packaging in the dropdown menu that appears in 'description of the base unit'.

If packaging is obstructive or discouraged packaging that has to be put with the HHW

after use, you should declare this as HHW and not as obstructive or discouraged packaging.

Parcel or transport packaging

Parcel or transport packaging is any packaging added in order to ship products in the context of sales via mail order or via internet to private individuals. The company that adds the parcel packaging or transport packaging is the responsible for packaging.

How do you declare parcel packaging?

You can do this either via the detailed declaration or by using one of the simplified declaration types.

Via the detailed declaration

You can do this via the detailed declaration by selecting the option 'Yes, I wish to be able to describe parcel packaging in new packaging sheets that I create in MyFost' in Settings and then allocating the weights per material in your packaging sheet in 'Composition'.

Via a sectoral declaration type

- **the parcel packaging declaration;** you do not have to draw up a separate packaging sheet for this, but you should indicate the total weight that you have put on the market per material category. The total weight therefore refers to the material that you have used for the parcel packaging itself, and not to the weight of the packaging of the products that are sent in the parcel packaging.
- **the e-commerce declaration;** you do not have to draw up a separate packaging sheet for this, but to declare the quantities that you have put on the market, per type of package. Three sorts of packages have been defined on the basis of format: small (<40l), medium (40-90L) en large (>90L). The standard composition per format was established on the basis of the package itself and the contents of the package. So this type of declaration differs from the 'parcel packaging' in that the packaging of the content of the package is included in the calculation. N.B. For this type of declaration, you pay a supplement of 10 %.

Schematic overview of the types of packaging

	Definition	Household	Industrial	Examples
Primary packaging	<p>Packaging that forms a sales unit at the point of sale.</p> <p><i>See also important information about the distinction between household and industrial.</i></p>	✓	✓	<p>Household: A bottle of shampoo, a butter tub, a can of lemonade, a jar of mayonnaise containing less than 1.2 kg, a 1.5 l drinks bottle.</p> <p>Industrial: The packaging of computers and computer accessories, the individual packaging of basic ingredients for bakers, the individual packaging of work clothes for professionals, a jar of mayonnaise containing more than 1.2 kg, a 30-l barrel of beer.</p>
Service packaging	<p>Packaging that is applied in the place where products or services are offered to the consumer. Usually applied when item is sold to the consumer.</p>	✓	✗	<p>A chocolate box, a plastic pot for meat products at the butcher's, a cup in a drinks dispenser, a sweets bag, a bread bag, a pizza box, etc. N.B.: carrier bags are service packaging but may only be declared via the 'carrier bag' declaration.</p>
Secondary packaging or collective packaging	<p>Packaging that is designed to hold together a number of sales units at the point of sale (with the exception of Multipacks).</p>	✗	✓	<p>A wooden crate as packaging for 6 or 12 bottles of wine, a box as packaging for bags of crisps.</p>
Promotional articles	<p>Promotional articles or giveaways are items or gadgets that companies give to (potential) customers, with the intention of advertising. The companies usually distribute them widely at trade fairs, at new product launches, at consumption in restaurants, cafes or hotels, at open days, etc. They are often printed with the brand or logo of the company offering the items.</p>	✓	✗	<p>A balloon, a lighter, gadgets: a calculator, a bottle opener, a cap, a notepad, ...</p>
Commercial gifts	<p>In the corporate world, companies offer free products for the purpose of maintaining a commercial relationship. These promotional gifts are often printed with the brand or logo of the company offering the items. They involve products of some value that fall outside the core business of the company itself.</p>	✓	✗	<p>Clothing, leather goods, a watch, a clock, a ballpoint pen, etc.</p>
Multipacks	<p>These are collective packaging units designed to be taken away by the consumer.</p>	✓	✗	<p>Packaging around six 1.5l bottles of lemonade, packaging around two aerosols.</p>

Tertiary packaging	Packaging designed to load and transport a number of primary and secondary packaging units.	✘	✔	A pallet, film around a pallet.
Hazardous household waste (HHW)	Household packaging that are sorted into Small Hazardous Waste (HHW) after use because they contained toxic or harmful products.	✔	✔	Household: pot of paint ≤ 10 l / kg, can of white spirit ≤ 5 l, insecticide. Industrial: bottle of gas with a return system, fire extinguisher, pot of paint > 10 l
Obstructive packaging	Packaging that prevents the selective collection, with the result that the replacement 'obstructive packaging' rate applies.	✔	✘	Plastic bottles of which at least 70 % is covered by a sleeve (or 50 % for bottles of less than 50 centilitres) that consists of a different material than the bottle and is not perforated for removal. Laminated plastic packaging with aluminium film used to pack drinks, vegetables, fruit, ready meals, animal food, cleaning products and personal care products. Laminated cardboard packaging such as crisps and dried milk packaging that contains less than 85 % paper fibre.
Parcel packaging	Any packaging added in order to ship products in the context of sales via mail order or via internet to private individuals.	✔	✘	A cardboard box or plastic bag as wrapping to ship products by courier.

Which packaging?

04

How do you draw up
and submit
your declaration

Points of particular attention – New in the 2023 declaration

Breakdown of categories 014 and 016

Fost Plus has the ambition to provide 100 % of packaging to offer a recycling solution. For a number of packaging materials that were previously fell under the valorised categories 014 and 016, recycling will be guaranteed and, from 2024, you will pay a lower rate than the rate applicable for the valorised materials. If you wish your advance invoices based on these rates 2024, we recommend you to adjust sheets containing these material codes for your declaration 2023 As of your declaration 2024 these adjustments will become mandatory.

011-08 Opaque PET trays

In 2022, the 011-08 category was still described as "Other plastics - Hard packaging, excluding compostable plastics or EPS". The national rollout of the new blue bag and the additional volumes of plastic packaging allowed for a more in-depth analysis possible. This showed that the packaging belonging to this stream are almost exclusively opaque PET trays. From your 2023 declaration, the category 011-08 is therefore exclusively for these opaque PET trays. If the packaging declared under this code does not fall under a specific other code we recommend using code 014-03 which applies to "Other packaging - whether composite or not - where plastic constitutes the main weight.

Thresholds plastics

Plastic packaging shall consist of at least 95 % of the material in question to be classified in its relevant material category. This weight percentage excludes inks adhesives and glues. Barrier materials such as Siox, Alox or EVOH can be added with a maximum of 5 % by weight. Additives such as caps, spouts, zips, labels, sleeves must still be declared separately according to their material composition. by material: paper-board (002), PE films (011-07), Other films (011-09), Compostable plastic packaging (014-02).

Reports MyFost

Fost Plus expands the range of available reports in MyFost. This gives you an easy and insight into the evolution of your packaging via the dashboard 'My Household Packaging' dashboard, you have the possibility to improve the quality of improve the quality of your declaration via the Sanity Check' report and you can already make your Green Dot contribution for 2023 and 2024 per packaging sheet via the report 'Overview per packaging sheet'.

Press declaration replaced by declaration parcel packaging

To improve usability improve and increase data quality the press & publishing declaration has been replaced with the parcel packaging declaration. Instead of reporting numbers by category, you only need to report the aggregated weight by material: paper-board (002), PE films (011-07), other films (011-09), compostable plastic packaging (014-02).

Detailed declaration - declaration per base unit

With a declaration per base unit, you prepare a packaging sheet for each packaging. Here you give specific details about matters such as the composition of the packaging and the weight per packaging material.

You can prepare your packaging sheets in two ways: manually via the library in MyFost or via an import from Excel.

If you use the same packaging for different products, you can opt to prepare a separate sheet per product or one packaging sheet for the various products together.

Once you have prepared all the packaging sheets, you indicate how many units of this you put on the Belgian market during the declaration year for each packaging sheet.

In the following years, you only have to prepare new packaging sheets for modified and new packaging.

For each packaging sheet, the contribution is calculated on the basis of the material and the weight that you have entered, excluding the weight of reusable packaging. Unit fees per kg are applied for each material (the Green Dot fees). The contribution for each packaging sheet is then multiplied by the numbers that you have declared. The contribution that you pay is therefore geared entirely to the packaging that you put on the market. The unit fees change every year in line with the costs incurred by Fost Plus for the collection, sorting and recycling of the packaging.

Preparing a packaging sheet

Packaging sheet

In MyFost, go to the 'Packaging sheets' tab and click on 'My sheets'. At the bottom, click on '+ new household'.

The data that you have to enter to produce a complete packaging sheet can be divided into a number of large blocks that we go through step by step below.

Tip

Before you start preparing packaging sheets and entering packaging data, it is best to think carefully about the base units that you wish to work with and remain consistent. For example, do you opt to prepare a packaging sheet for one can or for a multipack of six cans?

Tip

Choose a sheet unit that corresponds to the way in which you record your sales figures. After all, you will have to indicate how much you have put on the market per packaging sheet. This avoids the risk of inconsistencies and you save yourself a lot of conversion work.

Packaging sheet ?

- Product description
- Product family
- Type of responsibility

No packaging responsible selected
- Use Sheet
 - Starting next declaration year
 - In corrective or retroactive declaration
 - At specific date

Type of packaging sheet
HOUSEHOLD

1

[+ Add reference](#)

1 Product description

Provide as accurate as possible a description of the product that you put on the market.

3 Product family

Select the **product family** to which the product belongs from the drop-down menu.

3 Type of responsibility

Select the **type of responsibility** that you have for this packaging from the drop-down menu.

4 Use sheet

You can choose when your packaging sheet becomes valid:

- Starting next declaration year: your packaging sheet is valid as of 1 January of the next declaration year.
- In corrective or retroactive declaration: your packaging sheet is used specifically for a corrective declaration or a retroactive declaration.
- At specific date: you choose the date when the sheet becomes valid. You can use this option, for example, when you draw up a packaging sheet for packaging that you put on the market for the first time during the course of the year.

Tip

Is your packaging set to change in the coming months? If so, prepare a new version of your packaging sheet now with the day on which your packaging is to change.

5 Internal reference

Here you can add your own internal reference to the packaging.

6 Reference codes

You can add up to 10 extra reference fields. Click on 'Add reference'. Via the 'Settings' tab, you can give your own names to the related labels, numbered 1, 2, 3, etc. as standard.

Description of a base unit (BU)

WHAT IS A BASE UNIT?

A base unit is the smallest unit of a packaged product that consumers can purchase separately. For drinks, for example, the base unit is one bottle, regardless of whether or not this is sold in a Multipack with several bottles. For yoghurt pots that are packaged in fours and cannot be bought separately by consumers, a pack of four yoghurt pots is therefore the base unit.

A base unit can consist of a single packaging material – for example, an aluminium can containing a soft drink – or several packaging materials – for example, a glass jar containing chocolate spread with a plastic lid and a paper label.

WHAT IS A SHEET UNIT?

You can opt to prepare a packaging sheet for one base unit, for example a bottle containing a soft drink. But you can also combine several base units in one sheet, for example for a Multipack of six bottles that you put on the market as such.

For example

You sell 50-cl bottles of milk in packs of six in a plastic wrapper.

- You declare the main type of packaging element – the bottle – as 007 bottle/container.
- The number of base units is 6.

For example

- You declare a 50-cl bottle as 50 cl or 500 ml.
- You declare a 1 kg bag of flour as 1 kg or 1,000 g.
- If the product is not prepacked by weight or volume, you tick the option 'Product not prepacked by weight or volume'.

Declaration

1 Barcodes

Add the barcode (EAN/GTIN) to the base unit. Optionally, you can activate an automatic check on the barcode by selecting the option 'Yes, I would like to activate GTIN validation on the optional field of the barcode' in 'Settings'. If you tick this option, for each new packaging sheet that you create, the barcode entered is validated according to the applicable GTIN rules.

2 # BU per sheet unit

Enter the number of base units for which you want to prepare the sheet. If you want to prepare the sheet for six bottles of water packaged together, then enter the number 6. If you want to prepare the sheet for 100 pizza boxes together, then enter the number 100.

3 Type of packaging

The packaging of a product may consist of various elements. Declare the main type of packaging element here. Depending on the situation, this is the heaviest or the largest (primary) element.

4 Product Volume per BU / Product Weight per BU

Indicate whether the content of the product is determined according to volume (in ml, cl or litre) or according to weight (in g, kg or tonnes).

Declaration

Composition

Under the 'Composition' of your packaging, you indicate whether it is primary, secondary or tertiary packaging. You can declare **Multipacks** here, as well. If a primary packaging or a Multipack is made of various materials, then add a separate material line per packaging material.

Composition

Primary

Description component	Material	Wgt / sheet	Unit	per BU	% RC	% BS	Fee type	
<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text" value="g"/>		<input type="text" value="0"/>	<input type="text" value="0"/>	<input type="text" value="One-way - standard"/>	
Add a primary material line				Total per BU	0,000 g			

Multipack

Description component	Material	Wgt / sheet	Unit	per BU	% RC	% BS	Fee type	
<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text" value="g"/>		<input type="text" value="0"/>	<input type="text" value="0"/>	<input type="text" value="One-way - standard"/>	
Add a Multipack material line				Total per BU	0,000 g			

Secondary

<input type="text"/>	<input type="text"/>	<input type="text"/>	g		<input type="text" value="0"/>	<input type="text" value="0"/>	One-way - standard
+ Add a primary material line		Total per BU		0,000 g			

PRIMARY PACKAGING

1 Description of component

Here you can provide a description in your own words of the specific packaging component for which you enter the weight. For example: the label on the front, the bottle, the tray, the sealing film, etc.

2 Material

Indicate which packaging material each packaging component consists of.

Consult the Green Dot material specifications to determine the category under which you should declare the (various) packaging elements.

Consult the Green Dot specifications.

3 Wgt / sheet

Indicate the weight of the total number of base units for which you are preparing the sheet. For example, if you have opted to

prepare a sheet for six bottles, then give the total weight for the six bottles together per packaging material.

4 Unit

Indicate the unit in which you wish to enter the weight.

5 Total per BU

MyFost automatically calculated the weight for one base unit. The total weight that you have entered under Wgt/sheet is divided by the number that you gave earlier under # BU per sheet unit.

6 % RC

For each material line, you can declare what percentage of recycled raw materials was used.

7 % BS

For each material line, you can declare what percentage of vegetal raw materials was used.

8 Fee type

One-way or reusable

For each material line, you can indicate whether the 'one-way' or 'reusable' fee applies.

If packaging is reusable, all the components of the packaging are reusable. For example, if you declare a reusable bottle, you can also declare the label and the crown cap under the reusable fee.

Consult the chapter on reusable packaging.

Household hazardous waste (HHW)

One-way packaging of products that have to be sorted with the Household Hazardous Waste (HHW) after use have to be declared under the HHW fee. You declare all the elements of the packaging that may come into contact with the product and/or be taken to the recycling park as HHW.

For example

You declare a bottle of insecticide that is sold in a cardboard box. You declare all elements of the bottle (including the lid and the label) as HHW. The cardboard boxes can be declared as 'single-use' or 'one-way' because consumers can sort them with paper-cardboard.

[Consult the chapter on Household Hazardous Waste.](#)

Obstructive packaging

One-way packaging that is on the list of obstructive packaging also has to be declared under the 'Obstructive' fee. When you select the 'Obstructive' fee in your packaging sheet, a new field appears in the 'description of the base unit' section in which you specify which type of obstructive packaging this is.

[Consult the chapter on obstructive packaging.](#)

MULTIPACKS

The same rules apply for Multipacks as for primary packaging, with the following two exceptions:

- The weight that you enter under wgt/sheet is the total weight of the packaging material for the Multipack(s) in your sheet unit. The weight is not automatically recalculated by MyFost and divided by the number of base units (# BU per sheet unit).

- The fee type can only be one-way – standard.

[Consult the chapter on Multipacks.](#)

SECONDARY AND TERTIARY PACKAGING

For industrial packaging that you have to declare to Valipac, the same rules apply as for primary packaging. The only change involves the material categories, as you have to use the Valipac material categories.

Price

MyFost calculates the price of one sheet automatically. A distinction is made here (if appropriate) between the contribution for your household packaging and that for your industrial packaging.

You can alter the tariff year yourself to simulate the contribution for that specific packaging sheet for another tariff year.

Price (EUR)

Tariff year	Household	Industrial	Total
2021	0,310562	0,007149	0,317710

Function

1 Save

You can save your data and data processing by clicking on 'Save'. In the top right-hand corner of your screen you will see confirmation that your data have been saved. Once saved, the calculated fee per sheet unit will be displayed.

2 New version

You can make a new version of an existing packaging sheet by clicking on 'New version'. A new version of your sheet is then created automatically, containing exactly the same data in all fields. You have to indicate the date on which this new version becomes active. The previous version of the packaging sheet is then automatically set to inactive one day before

the new version becomes active. You use this function mainly when a packaging is changed throughout the year. The two versions of the packaging sheet have the same packaging sheet number, but now also have a version number. At the top right-hand corner under 'Sheet number' your first version will be displayed as v1.0.

In the packaging sheet, you can browse between the different versions by clicking on 'Previous version' or 'Next version' at the bottom of the screen. When you have created a second version, you will see the indication v2.0 at the top right-hand corner in your packaging sheet. If both versions of the sheet are valid within the same declaration year, make sure to link the correct sales quantities to these different versions in the declaration process.

3 Correct

You can easily modify an existing sheet that has not yet been used in a confirmed declaration by reopening the sheet, making the changes and then clicking on 'Save'. This will overwrite all information in this sheet and you will no longer be able to consult the old information. However, if an existing sheet has already been used in a confirmed declaration, you have to make a correction by opening the sheet, clicking on 'Correct' at the bottom of the screen, and then making the changes. This way, the existing sheet is turned into a 'revision', and the old information is saved. By default, your first sheet will be assigned version number v1.0. If you correct this sheet, it will be given version number v1.1. At the bottom right-hand corner, you will

be able to navigate through the different versions by clicking on "previous version" or "next version". Only the latest version of the sheet will be considered the active sheet. During the declaration, you can only associate sales quantities with the latest version, as other versions are not visible during the process.

4 Copy

You can make a copy of an existing packaging sheet by clicking on 'Copy'. A copy of your sheet is then created which contains exactly the same data in all fields. The copy is given a new packaging sheet number and is independent from the original packaging sheet. You use this function mainly when you have various packagings that are similar in terms of composition, but for which a few information fields differ. This enables you to easily create different packaging sheets.

5 Close

If you have already used a packaging sheet in a submitted declaration, you can no longer delete it. You can, however, close the sheet if you don't need it anymore. The sheet is then set to inactive and can no longer be used for your next declaration. You do, however, keep the data from your packaging sheet and you can still consult these data in your library.

How can you share your packaging sheets and have information added to them?

MyFost offers many possibilities for sharing information with colleagues, customers and suppliers. This not only makes preparing your declaration a lot easier, but also ensures that all the information remains correct and up to date.

How can you share your sheets with other companies?

Via MyFost, you can share the sheets in your library with other companies that are also members of Fost Plus, so that they can use them for their declaration as well.

- You select the sheets that you want to share.
- Enter the business number of the company with which you want to share the sheets and the e-mail address of the addressee.
- Your addressee can now add your sheets to their library.
- When you make changes to the sheets you have shared, the addressee receives notification of this.

- When you close the sheet, the addressee will no longer be able to consult it.

How can you have sheets supplemented by colleagues and suppliers?

In certain cases, you do not have the necessary data to be able to prepare a packaging sheet. However, one of your colleagues or your supplier does have these data. Via MyFost, you can share specific sheets with them so that they can add the correct data.

- In MyFost, you select the sheets in which you would like additional data.
- You enter the details of your contact person and MyFost sends an e-mail to your colleague or your supplier asking them to add data to the sheets.
- The link in the e-mail takes them to a secure zone in MyFost where they can consult and supplement the sheet.
- You can track which sheets you have sent for additional data via MyFost and

you receive a notification whenever data have been added to the sheets.

- Once you have accepted the additional data, the sheet is sent to your library and can no longer be altered by your colleagues or suppliers.

Watch the videos

How can you import or export your packaging sheets in batches via Excel

Go to the tab 'Packaging sheets' and click on 'My sheets'. Underneath, click on 'import' or 'export'.

An import via Excel always creates new sheets that are added to your library. This means that you cannot adapt or delete existing sheets via an import from Excel. To prevent your library containing duplicated sheets after the import, it is best to first empty your library completely every year and then upload all the sheets again via the import. Before deleting your old sheets, you can first create an export of the existing sheets in the correct format so that you can easily process the Excel and you have a back-up of all your packaging data. You can also opt to start from a blank Excel and use the templates available in MyFost.

There are two templates, each with a different layout:

- One row per packaging sheet
- One row per material line

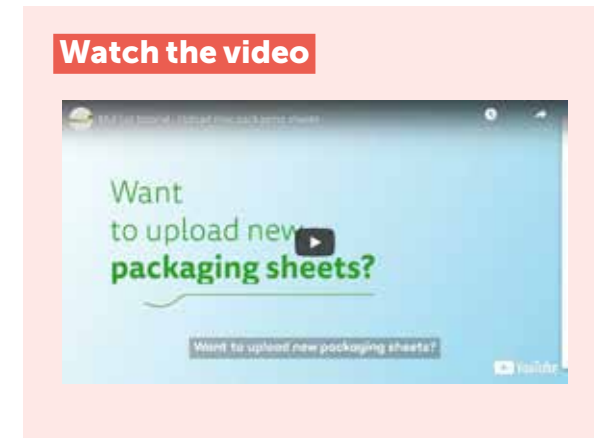

You will find all the codes you need to prepare the Excel file properly under 'Rates and Codes'.

N.B.: For the import into MyFost, only the first sheet in the Excel file is taken into account.

During the import, you are asked to match the columns from your Excel file with the corresponding fields from the packaging sheet. Then take a look at the preview and check that everything is correct.

You can monitor all import and export files via 'Import/Export monitor'. Here you can check which errors were found. If the import of some files has failed, you will also find an Excel file here that explains why. The error message appears in the last column.

This video shows you a lot of tips and tricks to make importing and exporting easier.

Household packaging that must be sorted as HHW after use	
OBSTRUCTIVE PACKAGING	
Household packaging that obstruct the collection, sorting or recycling	

**10** COMPOSITION_MATERIAL_TYPE

= Fee type

Code	Description
OneWay	Single-use – standard
SHW	Household Hazardous Waste – Single-use
Discouraged	Obstructive – Single-use
Reusable	Reusable

How do you apply the Green Dot categories to your packaging materials?

General rules

1/ All packaging elements must be declared based on their material category.

Examples

- Jam packaged in a glass jar with a label and a lid. The jar must be declared at the 'glass 001' rate, the label at 'paper-cardboard 002' and the lid at 'steel 003'.
- Smartphone packaged in a cardboard box. The cardboard box should be declared as 'paper-cardboard 002'. The charger and the earphones are each in a separate PE-bag with a paper label. These bags should be declared in the 'PE films 011-07' category, the two labels in the 'paper-cardboard 002' category.

2/ Distinction between **hard** and **soft** packaging

- **Hard or rigid packaging** will automatically return to its original shape after buckling. This includes bottles, flasks, containers, pots, trays and other blow-moulded or injection moulded plastic packaging. Hard packaging is usually comprised of dimensionally stable packaging which may or may not be combined with various packaging elements which can be separated from the actual packaging (e.g. label, cap, lid, sealing foil).
- **Soft or flexible packaging** is not rigid and buckles easily. It includes sacks, bags, envelopes, stand-up pouches, removable sealing films, wrappers and similar flexible packaging articles. Soft or flexible packaging consists of one

or more layers made of a variety of materials, including plastic film, paper, aluminium or a combination of these. The construction may be unprinted, printed, coated and/or laminated.

3/ Distinction between **transparent** versus **opaque** PET-packaging

- With transparent PET packaging, its content is clearly visible through the material.
- With non-transparent or opaque PET-packaging, its content is not or barely visible through the material.

4/ Distinction between **colourless** versus **coloured** transparent PET-bottles and flasks

- Most transparent PET-bottles and flasks are colourless which means that they have not been coloured, eg by adding a colouring pigment.
- The coloured transparent PET-bottles and flasks were coloured by the producer, eg by adding a colouring pigment. The transparent coloured PET-bottles are split in blue or other colours. The colour of the PET-bottle is best seen at the injection point (at the bottom of the bottle) or in the neck (on which the closures fit).

5/ Some household packaging must be sorted as hazardous waste after use. The determining factor as to whether the packaging has to go through the household hazardous waste flow [KGA flow (Flanders) / DSM flow (Wallonia) / DCM flow (Brussels)] and therefore has to be declared as a packaging of a hazardous product is:

- the type of product contained in the packaging or the type of packaging, such as;
 - paints, varnishes and lacquers
 - glues and silicones
 - lubricants, fuels, motor oils and mineral oils
 - pesticides (herbicides, insecticides, fungicides, etc.)
 - one-way gas cylinders
 - No exception is made for this type of products on a natural or organic basis.

- presence of
 - either one of the **hazard symbols** GHS06 or GHS08

- or a **child-resistant closure**

See also p. 21 for more detailed information.

6/ The “obstructive packaging” rate applies to the following household packaging that obstruct the selective collection, sorting and / or recycling:

- Plastic cans with metal bottom or top
- Plastic bottles that are at least 70 % covered by a sleeve (or 50 % for bottles < 50 cl), if it consists of a material different from the bottle and is not perforated
- Laminated plastic packaging with aluminium film for beverages, fruit and vegetables, prepared dishes, pet food, maintenance products and body care
- Oxo degradable packaging
- Laminated cardboard packaging of chips and milk powders, insofar as they contain less than 85 % paper fibre.

Nevertheless, these packaging must be declared according to the correct material categories.

Companies that can demonstrate what efforts they will make to make this packaging better sortable and / or recyclable are exempted from paying this obstructive packaging rate for 2 years and fall back on the rate of the respective materials. Please contact Fost Plus in advance.

7/ Distinction between aluminium laminates versus metallised films:

Aluminium laminates have a layer of aluminium laminated between two layers of plastic. The aluminium layer has usually a thickness of a few microns. Aluminium laminates (014-03) are not recyclable and for most applications considered obstructive packaging (pet food, prepared meals, maintenance products and body care, beverage bags, vegetables and fruit, bag-in-box wine bags, coffee breakfast cereals).

Metallised films are films in which a thin layer of aluminium is applied to the surface of a plastic film by means of a vapour deposition process. Metallised layers have a thickness of about 0.02-0.05 microns. Although metallisation adds colour to the recycle and thus reduces its value, it does not prevent the plastic from being recycled.

Materials	Categorie
RECYCLED	
General	
Glass Bottles, flasks and jars in glass. This does not apply to packaging in pyrex, crystal or natural opal glass that contains more than 600 ppm fluorine	001
Paper-cardboard (≥ 85 %) All packaging elements in paper-cardboard that consist of at least 85 % paper fibre*	002
Steel (≥ 50 %) All packaging elements that contain more than 50 % steel*	003
Aluminium (≥ 50 % and ≥ 50µ) All packaging elements that contain more than 50 % aluminium in weight* and have a thickness greater than or equal to 50 µ	004
Beverage cartons Any packaging element in laminated cardboard – with or without a cap – that consists of cardboard/aluminium/plastic or cardboard/plastic, with a minimum of 50 % paper fibre.* This is usually used to package liquids, mainly dairy products and fruit juices	008
Rigid plastics	
PET – Bottles and flasks - Transparent colourless Colourless bottles and flasks in transparent PET with at least 95 % PET*	005-01
PET – Bottles and flasks - Transparent blue Blue bottles and flasks in transparent PET with at least 95 % PET*	005-02
PET – Bottles and flasks - Transparent – other than colourless and blue Bottles and flasks in transparent PET, with another colour than colourless or blue with at least 95 % PET*	005-03 (or 011-04)
PET – Bottles and flasks – Opaque Bottles and flasks in non-transparent PET with at least 95 % PET*	011-06
PET - Hard packaging other than bottles and flasks – Transparent Hard packaging elements, other than bottles and flasks, which consist of transparent thermoformed PET, like trays and cups with at least 95 % mono APET or 95 % APET/PE*	011-05
<i>Note: this category does not apply for opaque thermoformed PET for which the category 'PET - trays - opaque (011-08)' applies.</i>	

Materials	Categorie
PP – Bottles, flasks and other rigid packaging Hard packaging elements consisting of PP, including bottles, flasks and caps, trays, cups with at least 95 % PP*	011-01
PS & XPS – Hard packaging, except for EPS (Expanded polystyrene, styrofoam) Hard packaging elements containing at least 95 % PS or 95 % XPS (Extruded polystyrene foamed trays)* <i>Note: this category does not apply to EPS (styrofoam), for which the category '014-01 EPS (styrofoam)' applies.</i>	011-02
PE – Bottles, flasks and other hard packaging Hard packaging elements in PE including bottles, flasks and caps, trays, cups etc. with at least 95 % PE*	011-03 (or 007)
Flexible plastic	
PE – Films Flexible packaging elements with at least 95 % of PE*	011-07

Materials	Categorie
<p>Other plastic films Other flexible packaging elements consisting of plastics (e.g. PP or mixed PO and multi-materials such as e.g. PET/PE, PA/PE, OPP/PETmet/PE and similar combinations with a minimum of 95 % of the polymer concerned*).</p> <p><i>Note: This category does not apply to compostable plastic packaging (014-02), to aluminium laminates (014-03) and to plastic films containing at least 95 % PE (011-07)</i></p>	011-09
VALORISED	
<p>PET - Trays - Opaque Hard packaging elements, other than bottles and flasks, which consist of nontransparent thermoformed PET, like trays and cups with at least 95 % mono APET or 95 % APET/PE*</p>	011-08
<p>EPS (styrofoam) Hard packaging elements consisting of at least 95 % of EPS (styrofoam)*</p>	014-01
<p>Compostable plastic packaging Compostable plastics like e.g. PLA, PHA, PBS/PBAT</p>	014-02
<p>Other plastic packaging – whether or not composite – where plastic accounts for the greatest weight Hard and flexible packaging elements that do not fall under the previous material categories. These include e.g.</p> <ul style="list-style-type: none"> laminated plastic packaging with an aluminium film (= aluminium laminates); soft and rigid packaging elements from other types of plastics or coatings (e.g. PVC, PVdC, PETG, PET GAG, C-PET); 	014-03
<p>Composite materials in which paper-cardboard accounts for the greatest weight Composite packaging in which paper-cardboard accounts for the greatest weight (total paper fibre < 85 %)</p>	012
<p>Aluminium smaller than 50µ, non-composite Packaging made of aluminium thinner than 50µ</p>	013
<p>Wood Packaging made of wood</p>	016-01
<p>Cork Packaging made of cork</p>	016-02
<p>Other valorised Other valorised packaging made of textile, rubber, ...</p>	016-03

Materials	Categorie
NON-VALORISED	
<p>Composite packaging in which glass accounts for the greatest weight Composite packaging in which glass accounts for the greatest weight, e.g. packaging in pyrex, crystal or opal glass that contains more than 600 ppm fluorine</p>	017
<p>Composite packaging in which steel accounts for the greatest weight Composite packaging in which steel accounts for the greatest weight</p>	018

Sectoral declarations

Parcel packaging and service packaging: declaration per packaging material

In conjunction with the professional federations for transport packaging and for service packaging, Fost Plus has developed a declaration system that simply involves declaring the weight per packaging material and not the number of individual packaging units.

How do you declare that?

Determine per packaging material how many kilograms you have to include in your (own) declaration and enter the weights in MyFost.

The **'parcel packaging'** section contains more information about the definition and the declaration of your transport packaging.

The **annex on service packaging** contains more information about the definition and declaration of your service packaging.

Consult **the Green Dot rates** to find the rate per packaging material.

Wine: declaration per type of packaging

Together with the Belgian Federation of Wines and Spirits (Vinum et Spiritus), Fost Plus has defined a number of standard references for glass bottles, stone jugs, cubitainers, cans and outer wrappings. For each reference, we calculated an average weight of the packaging, bearing in mind all packaging elements such as labels and corks.

How do you fill in the declaration?

Note the number of packaging units that you have put on the market in Belgium per reference.

Consult [the Green Dot rates](#) to find the fee per reference.

In addition to this packaging, do you also declare other products or reusable packaging? If so, use the [detailed declaration](#) or the [fixed-price declaration](#) for this packaging.

Examples:

- For three 750-ml bottles of wine in a cardboard box, you declare the number of bottles and the number of cardboard boxes to Fost Plus.
- For six 750-ml bottles of wine in a cardboard box, you declare the number of bottles to Fost Plus. In this example, the cardboard box is an industrial outer packaging, as there are more than three units per box. So you have to declare the cardboard box to Valipac.

Packaging levy versus information and take-back obligation

The legal obligations regarding your packaging result from two different sets of legislation:

1. The packaging levy on drinks packaging: contact Customs and Excise (Ministry of Finance) about this.
2. The legal information and take-back obligation for household packaging: contact Fost Plus about this.

So paying the packaging levy to Customs and Excise does not exempt you from the information and take-back obligation relating to the packaging.

Distinction between household and industrial packaging for the declaration wines and spirits

Household packaging

Bottles (glass, bottles in PET, stone jugs, etc.) and cans

Cubitainers and related containers ≤ 20 l

Repackaging: cases, boxes, ...

→ Declare at Fost Plus

Industrial packaging

Palettes, plastic film around palettes, ...

Cubitainers and related containers > 20 l

Cases, boxes, etc. containing more than 3 units

→ Declare at Valipac

Declaration Pharma (pharmaceuticals products): declaration by type of packaging

This type of declaration is exclusively for packaging of pharmaceutical products and was developed in consultation with the sector and its members.

Types of packaging

Nine specific packaging types were defined, including tube, blister, spray, vial, syringe, ampoule, pen, sachet, inhaler, bottle/vial/pot and finally a residual category. For certain types of packaging, a further distinction was made between the material that makes up the main packaging element. For example, you should distinguish in your declaration whether your spray is made of glass, aluminium or plastic.

The declaration of pharmaceutical products concerns only products falling under the code product family E1 - Pharmaceutical products.

How are the rates calculated?

An average weighted weight was calculated per type of packaging, based on the data from our members' detailed declarations supplemented by lab analyses of packaging. According to their sales volume, the weight and composition of the packages weigh relatively in this calculation. The current Green Dot rates are then linked to the obtained weights and packaging composition. In each case, the average weight of a packaging type includes the materials and weights of all packaging elements and not just the main packaging element.

What is a sales unit?

A sales unit is the total package sold to the consumer and can consist of several components.

It can consist of several basic units (e.g. 2 or 4 blister push-through strips, 50 or 100 sachets, 1 or 3 ampoules, etc.) or of several packaging elements (e.g. cardboard outer box + glass bottle + plastic screw cap + paper label). In the declaration, enter the number of sales units sold by type of packaging.

Example

- You have sold 200,000 units of your product. The packaging of this product consists of a cardboard box with 4 aluminium blisters (blister strips) of 10 tablets each. You enter '200,000' as the sales unit under the Blister - aluminium category, regardless of how many tablets it contains.
- You have sold 10,000 units of your product. The packaging of this product consists of a cardboard box containing 60 sachets. You specify as the sales unit '10,000' under the 'Sachet' category, regardless of how many sachets it contains.

The e-commerce declaration

1. Who?

You can make an e-commerce declaration if you bring products to the Belgian market via e-commerce.

2. What?

The e-commerce declaration can be made using a simplified procedure. You do not need to give details of the package contents. To enable this simplification, we have defined three package types based on size - small, medium and large.

To avoid having to request specifications about the contents of your packages, Fost Plus has laid down the standard composition of the package per size based on various elements:

- the package itself
- the contents of a standard package

Based on the data that we received via producers of packaging for e-commerce and our own data, we have defined the sizes as indicated in the following table:

Package type	Volume
Small	< 40 l
Medium	40 – 90 l
Large	> 90 l

The contents of the standard package are calculated based on data from fixed declarations per product family. The contents of the package are based on the products most frequently sold via e-commerce.

Per product family, we have calculated a weighted average Green Dot rate based on the fixed declarations of each product family in our databases.

3. How?

You can submit the declaration quickly and easily on line via MyFost.

The only thing left to do is to calculate the number of packets placed on the market for each type of packet. This type distinguishes itself from the declaration transport packaging' because the packaging of the contents of the parcel are also taken into account.

The e-commerce declaration can be combined with the detailed declaration after consultation and permission from Fost Plus.

4. Financial contribution

This simplified declaration applies as of the 2021 declaration year. Your annual contribution amounts to a minimum of EUR 100.

A supplement of 10 % is charged for the right to use this simplified declaration system which makes your administration easier compared with a detailed or fixed declaration. Consult **the Green Dot rates** to know the tariff per package.

Carrier bags - per type of packaging

On the basis of a market survey, Fost Plus has developed a simplified declaration for plastic carrier bags. All you have to do is declare the number of plastic carrier bags per category:

Type draagtas

HDPE or (L)LDPE < 15 micron

HDPE or (L)LDPE > 15 and < 25 micron

HDPE or (L)LDPE > 25 and < 35 micron

HDPE or (L)LDPE > 35 and < 50 micron

HDPE or (L)LDPE > 50 micron

Compostable < 15 micron

Compostable > 15 and < 25 micron

Compostable > 25 and < 35 micron

Compostable > 35 and < 50 micron

Compostable > 50 micron

HDPE of (L)LDPE reusable carrier bags

Which carrier bags do you declare?

We distinguish three types of carrier bags:

- One-way carrier bags are carrier bags designed to be used just once. Both the take-back and the information obligations apply here. So they have to be included in your declaration.
- Reusable carrier bags are carrier bags designed to be reused for the same purpose and for which there is a system in place to trade in worn bags. The information obligation alone applies here. So you have to include them in your declaration (under the 'reusable' category as above), but you do not pay a contribution.
- Carrier bags that are not considered to be packaging. These are carrier bags made of sturdy material, designed for almost unlimited use, for the same or another purpose and for which no exchange system exists. Examples include carrier bags made of nylon, cotton, jute, wicker and woven (synthetic) fabric. These carrier bags are not subject to a take-back obligation or an information obligation. So you do not need to include them in your declaration.

Avoid a twofold declaration!

Previously you could declare carrier bags via the service packaging declaration or the detailed declaration. As of the 2021 declaration, this can only be done via the specific declaration for plastic carrier bags. So be sure to check that you have not declared your carrier bags twice.

Consult [the Green Dot rates](#) to find the fee per carrier bag type.

Simplified declarations

The fixed-price declaration: declaration per product family

How are the fixed fees calculated?

Every year, Fost Plus calculates the average weighted weight and the average packaging composition for each product family on the basis of the data from the detailed declarations submitted by our members. On the basis of the Green Dot fees, we then calculate a fixed fee per unit for each product family.

How do you draw up your declaration?

Select 'add' in MyFost to add the product families for the products that you have put on the Belgian market. A pop-up window appears in which you prepare your selection by double-clicking on the desired product family. Click on 'close' when your selection is complete.

For each product family, you indicate the number of consumer units that you have put on the Belgian market in the declaration year. The consumer unit is the smallest unit that the consumer is able to purchase. This is generally the same as the unit found on the retail shelves.

Please note: with Multipacks you declare the number of individual units in the Multipack sold and not the number of Multipacks sold!

You can enter these numbers for each product family in the 'number' column or you can input the numbers via an Excel import. To do this, you click on 'export numbers'. In the 'Import/Export monitor' tab, under 'export' you will find the Excel file that you can use to enter the numbers. Download the file by clicking on it and enter the numbers per product family in

column A. Do not change any data in other columns! Then upload the Excel file with the numbers via 'Import numbers'.

Do you also declare service packaging? In that case, combine the fixed-price declaration with the specific declaration for service packaging.

Financial contribution

You pay a fixed fee per unit declared. This fee depends on the product family and changes every year. Consult **the Green Dot rates** to find the fee per product family. Your annual contribution amounts to a minimum of EUR 100.

Simplified declarations

Turnover declaration

What is a turnover declaration?

Once you have submitted an initial (reference) declaration, in certain cases you can have your next two declarations calculated based on your company's turnover. In that case, every year you have to indicate the turnover recorded by your company and your contribution will simply be calculated based on the development of your turnover.

When is your company eligible?

- Your company is legally responsible for packaging.
- Your company has just one member number at Fost Plus.
- Your company has not granted or accepted any mandates.
- You have submitted a reference declaration.
- The total weight of this reference declaration is a maximum of 100 tonnes.

Important

You are not obliged to make a turnover declaration. You can opt at any time to use one of the other declaration systems.

If your reference declaration no longer correctly reflects the packaging that you put on the market, you cannot use the turnover declaration. In that case, you have to submit a new reference declaration.

The reference declaration is any type of declaration other than the turnover declaration that serves as the basis for calculating the next 2 turnover declarations: it can be a detailed declaration, a sectoral declaration or a fixed-price declaration.

How do you submit a turnover declaration?

Every year, you declare the turnover that your company has recorded on the Belgian market in the past year. This may be the total turnover recorded or the turnover from the products for which you declare your packaging to Fost Plus. You always give the most recent (official) turnover figure that is available in January. For your very first turnover declaration, you give the turnover figure of the two previous years.

Your financial contribution

The contribution of your turnover declaration is calculated on the basis of your reference statement, the development of your turnover and the applicable Green Dot fees for the declaration year.

The reference declaration and the reference year mean the last year for which the member filed a declaration type other than a turnover declaration.

For example

You submitted a reference declaration for the 2020 declaration year. Your contribution amounted to EUR 360. The total weight of the declaration < 100 tonnes. For 2021, you submit a turnover declaration, bearing the following turnover figures:

- 2022: 10.526.111 EUR
- 2023: 9.845.540 EUR

Step 1: We calculate the total weight per material (in kg) of the 2021 declaration:

Material	kg
Glass (001)	10.000
Paper/Cardboard (002)	250
Steel (003)	750
PP (011-01)	330
TOTAL	11.330

Step 2: We calculate the turnover factor:

$$\frac{9.845.540 \text{ EUR (turnover 2023)}}{10.526.111 \text{ EUR (turnover 2022)}} = 0,9353$$

Step 3: We multiply the weight per material by the turnover factor:

Material	kg (2022)	kg (2023)
Glass (001)	10.000	9.353
Paper/Cardboard (002)	250	234
Steel (003)	750	701
PP (011-01)	330	309
TOTAL	11.330	10.597

Step 4: We multiply the weight per material by the Green Dot fees per material:

Material	kg (2023)	EUR/kg	EUR 2023 (Rounded off)
Glass (001)	9.353	0,0499	467
Paper/Cardboard (002)	234	0,1189	28
Steel (003)	701	0,2114	148
PP (011-01)	309	0,4754	147
TOTAL	10.597		790

The contribution for your 2023 declaration amounts to EUR 790.

Updating the reference declaration

The reference declaration plays an important role in the calculation of the contribution for your turnover declaration. So it is important that this reference declaration is a realistic reflection of the packaging that you put on the market, its weight and the material mix. To avoid significant variations compared with the actual situation, you have to submit a new reference declaration when:

- the packaging for which you are responsible changes, for example because the composition of your packaging changes, you put new products on the market or your company has carried out a takeover.
- the maximum period for a turnover declaration has expired. You have to submit a new reference declaration every three years in any case.

You can use for the reference declaration a sectoral declaration (e.g. wine, pharma, etc.) We will let you know in good time when you have to submit a new reference declaration.

Total Market declaration

What is a Total Market declaration?

A Total Market declaration is only available for members who put fewer than 10,000 units/packaging units on the market. With this type of declaration, you only give the total number of units/packaging units that you put on the Belgian market.

When is your company eligible?

- Your company is legally responsible for packaging.
- Your company has just one member number at Fost Plus.
- Your company has not granted or accepted any mandates.
- Your company puts a maximum of 10,000 units/packaging units on the market per year.

Important

You have received or granted mandates, you cannot use the Total Market declaration.

How do you submit a Total Market declaration?

You declare the total number of units/packaging units that you have put on the market to Fost Plus every year.

Your financial contribution

As standard, you pay the minimum contribution of EUR 100.

Submitting your declaration

Depending on your activity, sector and the number of units put on the market, a number of declaration types are available in **MyFost**.

Consult the **chapter on the various declaration types** for more information.

The following points apply for all declaration types:

- The quantities that you declare correspond to the quantities that you have put on the Belgian market during the declaration year. You do not have to declare products and packaging that you export abroad.
- You also have to declare the packaging of free products and samples, as well as the packaging for shipment with sales to private individuals via the internet. Parcels that you send to companies – whether or not via e-commerce – have to be declared to Valipac.
- You cannot include any negative quantities in your declaration, for example for taking back packaging that you declared in the previous declaration year or for packaged products that you have no longer put on the market in the current declaration year.
- Go to MyFost and select the declaration type that you wish to use via the 'Declarations' tab. Depending on your activity, sector and the number of units put on the market, you can combine various declaration types.

Detailed declaration - submitting a declaration per base unit

MyFost automatically takes over all active packaging sheets from your library for your declaration. For each packaging sheet, you declare the quantities that you have put on the Belgian market in the declaration year.

You can enter these numbers per packaging sheet in the 'number' column or you can import the numbers from an Excel file. To do this, you click on 'export numbers'. In Import/Export monitor tab, under 'export' you will find the Excel file that you can use to fill in the numbers. Download the file by clicking on it and fill in the numbers per packaging sheet in column A. Do not change any data in the other columns!

Submitting a declaration per packaging material

Select 'add' to add the materials for the packaging that you have put on the Belgian market. A pop-up window appears in which you prepare your selection by double-clicking on the desired materials. Click on 'close' when your selection is complete.

For each material, you indicate the weight per packaging material that you have put on the Belgian market in the declaration year. You can enter these weights per material in the 'number' column or you can input the weights via an Excel import. To do this, you click on 'export numbers'. In the 'Import/Export monitor' tab, under 'export' you will find the Excel file that you can use to enter the numbers. Download the file by clicking on it and fill in the numbers per material in column A.

Submitting a declaration per packaging type

Select 'add' to add the (sub)categories for the products that you have put on the Belgian market. A pop-up window appears in which you prepare your selection by double-clicking on the desired (sub) categories. Click on 'save' when your selection is complete.

For each (sub)category, you declare the quantities that you have put on the Belgian market in the declaration year. You can enter these numbers per (sub)category in the 'number' column or you can input the numbers via an Excel import. To do this, you click on 'export numbers'. In the 'Import/Export monitor' tab, under 'export' you will find the Excel file that you can use to enter the numbers. Download the file by clicking on it and fill in the numbers per subcategory in column A.

Reusable

If you put reusable packaging on the Belgian market, you have to specify the proportion of 'new reusable' packaging – i.e. that which you have brought newly into circulation in the declaration year – compared with the total number of reusable packaging units in your declaration.

For example

You put 1,000,000 reusable bottles on the market. Of these, 950,000 were already used in the previous declaration year and 50,000 were brought newly into circulation and therefore used for the first time. In this case, the proportion of 'new reusable' is 5 % (50,000/1,000,000).

Mandates

If you use mandates, both principals and representatives have to fulfil a number of obligations. The two parties have to conclude a mandate agreement and keep a copy in their possession.

Service packaging mandates

In your declaration, you make a distinction between the mandates that you have granted and the mandates that you have accepted. For the mandates that you have granted, you fill in the 'mandates granted' section. You enter the details of your supplier and the weight delivered per packaging material. You do the same for 'Mandates received'. For the mandates that you have received from your customers, you enter the details of your customer and the weight delivered per packaging material.

Belgian companies mandates

If, as a Belgian company, you have a mandate with another Belgian company – and this does not involve service packaging – then you only have to pass on the data of the mandated company.

Foreign company mandates

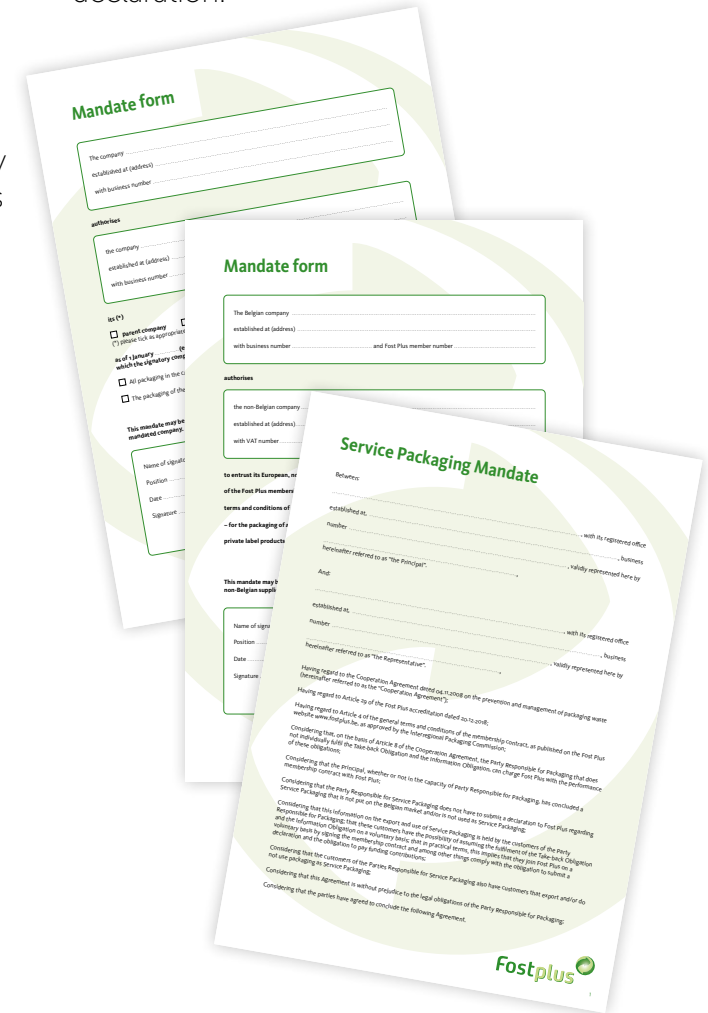

In your declaration, you make a distinction between the mandates that you have granted and the mandates that you have accepted. For the mandates that you have granted, you fill in the 'mandates granted' section. You enter the data of your supplier and the number of consumer units that they supplied. You do the same for the mandates received. For the mandates that you have received from your Belgian customers, you enter the data of your customer and the number of consumer units that you supplied.

Summary

You can assess the declaration yourself before submitting it on the basis of the developments in weight or contribution compared with the previous year. You can do this via the overview in the summary. If there are major differences compared with a previous declaration, you have to give a reason and an explanation before you can submit the declaration.

Confirming

Finally, do not forget **to confirm** your declaration.

How is your declaration checked?

A complete and correct declaration is in the interests of everyone – including your company. After all, it ensures that each company pays the correct contribution for its packaging. In addition, it provides us with reliable figures for all packaging that comes onto the market and for the recycling percentages that we achieve. Your declaration is therefore verified in several ways, from systematic checks in our system to more detailed checks on site.

Evolution of your declaration

Our systems search for striking falls or rises in your declaration compared with your previous declaration. If we detect abnormal developments in your declaration, we ask you to explain or adapt the data. This is done before you submit the declaration.

Composition of the packaging

On the instructions of Fost Plus, an external, independent lab regularly examines the composition of the packaging that comes onto the market. We use these data to check the packaging sheets in your declaration. If we notice any discrepancies, we ask you to correct your packaging sheet or sheets.

Audit

Fost Plus brings in a company auditor who checks a number of members on a random basis to see whether their declaration is complete and correct. The checks are carried out in the offices of the company where the auditor examines the declaration together with a member of staff, or digitally via video conferencing. We then inform you of the auditor's findings and ask you to rectify any errors.

05

Mandates

Mandates

In certain cases, you can let another company take over (part of) your declaration. You can do so, for example, when your company falls under the legal take-back and information obligations but does not have access to the necessary information to fulfil these obligations. In practical terms, you then give the other company a mandate to take care of (part of) your declaration.

You can also combine these two options. You prepare the declaration yourself for part of your packaging and let one or more other companies join for the other part of your packaging.

Which companies can take over (part of) your declaration?

Belgian companies

As a Belgian company, you can take over (part of) the declaration of another company in the following cases:

- As the parent company for a Belgian subsidiary
- As a holding company for a Belgian operating company

- As a franchisor or a Belgian franchisee
- As a purchasing centre for Belgian members.

Please note

- As a franchisor or purchasing centre, you can only take over the declaration for packaged products that were ordered or delivered via you.
- You can only take over the declaration for packaged products. **Other conditions apply for service packaging.** More information about this is provided in the [annex](#).

Foreign companies

- Foreign suppliers from whom you purchase packaged products in order to put them on the Belgian market.
- This option does not apply for packaged products bearing your own brand or for service packaging. For this, you always have to join yourself. More information about service packaging is provided in the [annex](#).

Legal responsibility

Even if you have given a mandate to another company for (part of) your packaging, as the party responsible for the packaging you remain legally liable for all packaging that you put on the market. So in the event of an official inspection, you must be able to demonstrate that your company fulfils the legal obligations. You also have to verify that the company that takes your place fulfils your obligations properly.

How do you give a mandate?

To have another company take over (part of) your declaration, you have to fill in a mandate form with which you give the company a mandate to submit your declaration in your place.

The mandate forms for Belgian and foreign companies can be found in [MyFost](#).

Keeping mandate lists up to date

As the principal, you prepare a list every year – together with your declaration – of the companies to which you have given a mandate. You also indicate the total number of consumer units that they have supplied to your company.

As a representative, you prepare a list of the companies for which you make a declaration. For each customer and for all products, you indicate the total number of consumer units provided by your supplier.

We use this information to compare your declaration with the declarations submitted by your suppliers in order to obtain a complete picture of the number of packaging units that you have put on the market. We inform you of the result of these twofold checks so that you can take action if a supplier fails to comply with its agreements.

Contribution with mandates

The representative who is responsible for the declaration also pays the contribution resulting from this declaration.

06

Contributions and invoicing

Contributions and invoicing

How is your contribution calculated?

As a member of Fost Plus, you pay an annual contribution for the collection, sorting and recycling of your household packaging. The amount depends on the type and quantity of packaging that you put on the market.

The annual contribution for your company is calculated on the basis of **the Green Dot fees**. Each packaging material is allocated a Green Dot fee that reflects the actual cost of collection, sorting and recycling. The revenue that Fost Plus obtains from the sale of the materials is also taken into account.

Depending on the **declaration system** that you choose, the fees are applied per kg or per unit.

The minimum contribution is EUR 100. If you put obstructive or discouraged packaging or packaging that has to be sorted with Household Hazardous Waste after use on the market, the minimum contribution is EUR 250. If you opt for payment by direct debit, you receive a discount of EUR 50.

You do not pay any contribution for reusable packaging in your declaration. If you declare solely reusable packaging, you pay the minimum contribution.

How is your contribution invoiced?

You receive intermediary invoices during the course of the year. We calculate the amount of this interim invoice on the basis of your most recently processed declaration. Once you have submitted your declaration, we prepare a final statement

on the basis of the packaging that you have actually put on the market and we draw up an additional invoice or a credit note for the difference between the contribution you have actually paid and the total of the interim invoices.

How do you request a correction of your declaration?

You can submit a request to have your annual declaration corrected until 30 June of the calendar year in which the declaration was required to be submitted at the latest. Fost Plus examines the admissibility of each request for correction. If your request is accepted, your contribution is recalculated and you receive a new statement based on your corrected declaration.

Annexes

List of Packaging – Not packaging

product	packaging	not packaging
FOOD		
Aluminum foil and cling film used as service packaging	✓	
Beer mat		✓
Cake and pastry tins sold with cake or pastry	✓	
Cake and pastry tins sold without a cake or pastry		✓
Capsules for drinks systems (e.g. coffee, cocoa, milk) left empty after use	✓	
Capsules, pouches and pads with coffee, tea, etc. for drinks systems that are thrown away with the used product		✓
Fantasy packaging for food, e.g. baby's bottle containing sweets	✓	
Chip fork		✓
Disposable filled plates, as well as chips bags, trays, cups, etc.	✓	
Empty plate		✓
Empty cup		✓
Filled gift basket, e.g. a basket containing specialty beers	✓	
Filled non-natural shell, e.g. scallop		✓
Empty non-natural shell		✓
Natural shell		✓
Cheese rind		✓
Spoon sold with ice cream, etc.		✓

* see information on service packaging

product	packaging	not packaging
Mechanical mill integrated into refillable recipient, e.g. refillable pepper mill		✓
Mechanical mill integrated into a non-refillable recipient, filled with a product, e.g. pepper mill filled with pepper	✓	
Mustard jar	✓	
Paper coaster for the hotel and catering sector		✓
Paper coaster on presentation dish		✓
Plastic cutlery		✓
Promotional paper on a crate containing drinks bottles		✓
Straw sold with drinks packaging or offered with drink		✓
Rice bag	✓	
Stirrer, e.g. for coffee		✓
Sandwich bag *, bread bag *, etc.	✓	
Candy wrapped in toys (and for which the toy is accessory)	✓	
Skewer stick		✓
Lollipop - and ice (cream) pop stick		✓
Teabag		✓
Ceramic packaging, e.g. pâté dish	✓	
Decorated tin box for biscuits, cereals, alcohol, etc.	✓	
Disposable weaning bottles sold empty		✓
Disposable weaning bottles sold filled	✓

Leaflet		✓
Dropper that is separate from the packaging or cap		✓
Dropper that is part of the packaging or cap	✓	
Edible capsules		✓

<i>product</i>	<i>packaging</i>	<i>not packaging</i>
Inedible capsules, e.g. glass phials	✓	
First aid kit		✓
Filled glass bottles for injections	✓	
Inhaler with filling, when the inhaler is separate from the packaging		✓
Inhaler with filling, when the inhaler is part of the packaging	✓	
Inhaler without contents		✓
Empty glass bottles for injections		✓
Empty syringe		✓
Measuring spoon		✓
Syringe needle		✓
Application device for vaginal cream		✓
Sterile barrier systems (bags, trays and materials needed to keep a product sterile)	✓	
Tampon applicator (or applicator sleeve for tampons)		✓
Prefilled syringe	✓	
HORTICULTURE AND GARDENING		
Flower pots intended for the whole life of the plant		✓
Flower pots only used for the sale and transporting of plants and are not intended for the whole life of the plant	✓	
Flower pots that are used during the production process but that are no longer with the plant when the plant is placed on the market		✓

<i>product</i>	<i>packaging</i>	<i>not packaging</i>
Sleeves (primary packaging)	✓	
Plant growing holders that are necessary for the production process throughout marketing		✓
Ornamental flower pots		✓
Stone flower pots		✓
Trays (for marketing)	✓	
Packaging for plant roots made of biodegradable material, e.g. a turf pot and jute net		✓
Packaging for plant roots made of non-biodegradable material, e.g. plastic bag and synthetic cord	✓	
Packaging films	✓	
TOOLS AND DIY		
Tool box sold filled and equipment box		✓
Cable reels (household), extension lead for electricity on permanent reel and garden hose on permanent reel		✓
Cable reel, single-use reels for electric cable, etc. (sold in DIY outlets, etc.)	✓	
Cable reels: reusable industrial reels for roadworks		✓
Sales packaging for tool, e.g. cardboard box for a drill	✓	
CLOTHING, SHOES, TEXTILES AND RELATED		
Bobbin with thread	Weight ≤ 200 g	Weight > 200 g
Cylinders and tubes around which flexible material is wound (textile, synthetic film, aluminium, paper, etc.)	Wall thickness ≤ 5 mm	Wall thickness > 5 mm

<i>product</i>	<i>packaging</i>	<i>not packaging</i>
Label in item of clothing		✓
Label attached directly or permanently to the product	✓	
Spools, holders, centres, sleeves, etc. if they fulfil a mechanical function in an industrial production process		✓
Coat hangers not expressly intended to be reused, e.g. plastic coat hangers, coat hangers for dry cleaners	✓	
Luxury coat hangers intended for reuse, e.g. wooden coat hangers		✓
Staples, pins and clips	✓	
Supports in luxury shoes intended for reuse		✓
Supports in shoes not intended for reuse	✓	
Packaging provided by drycleaners	✓	
Moisture absorbing material that is part of a packaging system (e.g. bag containing silica gel in shoebox)	✓	
Bag around a sleeping bag in which to keep the sleeping bag		✓
Bag in which a tent and the various parts are kept		✓
ELECTRO AND ACCESSORIES		
Case for electric shaver		✓
Case for camera		✓
Film roll		✓
Folder containing photographs and negatives	✓	
Envelop around folder containing photographs	✓	

<i>product</i>	<i>packaging</i>	<i>not packaging</i>
Plastic tube (for film roll)	✓	
Disposable camera		✓
MULTIMEDIA		
CD spindles (sold with CDs, not intended for storage)	✓	
CD spindles (sold without CDs, intended for storage)		✓
Box or sleeve for CD, DVD, Blu-ray, cassette, video, etc.		✓
Film around box or sleeve for CD, DVD; Blu-ray, cassette, video, etc.	✓	
Label affixed to machine (computer, etc.), but cannot be removed, e.g. serial number		✓
Instructions for use		✓
Installation diskette for program		✓
Toner for printer or photocopier (with electronic component)		✓
Toner cartridge for printer or photocopier, etc. in plastic bottle	✓	
HOME FURNISHINGS AND ACCESSORIES		
Fire extinguishers		✓
Box, crate or cassette in wood or plastic to store cutlery during the lifespan of the product		✓
Box, crate or cassette in cardboard to deliver cutlery	✓	
Single-use gas cylinders for gasses for household use, e.g. camping gas	✓	
Wooden supports for furniture (comparable with a pallet)	✓	

<i>product</i>	<i>packaging</i>	<i>not packaging</i>
Rechargeable steel and composite bottles for various sorts of gas (except fire extinguishers)	✓	
Metal cages to transport gas cylinders		✓
Casing for candles (e.g. grave candles, garden candles, tealights)		✓
SUNDRY		
Ornaments		
Luxury packaging to keep jewellery (throughout the lifespan of the product)		✓
Box for a silver spoon, medal, etc. in which to keep the item throughout its lifespan		✓
Publishers		
Laminated cover (with the title of the book) to protect the book		✓
Cardboard protection for (luxury) books		✓
Normal envelopes used by companies to send post		✓
Normal envelopes used by private individuals to send post		✓
Postal package used by private individuals		✓
Flyleaf with address used for shipments		✓
Packaging around telephone and fax directories	✓	
Packaging of brochures sent by associations for membership if in a normal paper envelope		✓

<i>product</i>	<i>packaging</i>	<i>not packaging</i>
Packaging of dailies, weeklies, monthlies, magazines, periodicals, free regional press, free publications, printed advertisements and other printed matter (except for printed matter expressly included in this list), including if sent by post	✓	
Packaging used to send products ordered by express courier, mail order and the internet	✓	
Official deliveries		✓
Toys		
Building blocks box		✓
Toy filled with sweets, i.e. items that are also put on the market without sweets		✓
Games box and puzzle box		✓
Intermediate pieces of model building packs	✓	
Stationery and related items		
Filled (luxury)box for drawing materials, e.g. aluminium box for coloured pencils	✓	
Holder or tube around which adhesive tape is wrapped	✓	
Single-use holder for rolls and tearing off adhesive tape		✓
Pens, pencils and propelling pencils		✓
Jars and paint watercolor box	✓	
Packaging of glue, corrector in a tube or bottle (and any brush in the cap)	✓	
Disposable refills for pens, ballpoint pens, fountain pens, etc.	✓	

<i>product</i>	<i>packaging</i>	<i>not packaging</i>
Others		
Lighter		✓
Fire extinguisher		✓
Gift wrapping paper sold separately		✓
Gift wrapping paper offered as service packaging	✓	
Cylinders and tubes around which flexible material is wound (textile, synthetic film, aluminium, etc.)	Wall thickness ≤ 5 mm	Wall thickness > 5 mm
Box with snow chains		✓
Label attached directly or permanently to the product	✓	
Instructions for use and manual		✓
Free samples	✓	
Discount coupon		✓
Plastic sleeve around packaging	✓	
Matchbox	✓	
Radio frequency identification labels (RFID)		✓
Packaging provided with services, e.g. repaired shoes, watches, pens, adjustments to clothes, etc.	✓	
Moisture absorbing material that is part of a packaging system	✓	
Moisture absorbing material that is not part of a packaging system		✓

Multipacks rules

A Multipack is a type of household packaging that combines several individually packed consumer units and is intended to be sold in this way to the consumer.

- 104 How do you declare Multipacks?
- 105 Drinks
- 106 Sweets, biscuits, chocolate and ice cream
- 107 Other consumer products
- 108 Non-consumer products
- 108 Special offers

← [Back to overview 'Multipacks'](#)

Multipacks

A Multipack is a type of household packaging that combines several individually packed consumer units and is intended to be sold in this way to the consumer. The consumer can remove this collective packaging without affecting the properties of the individual products. In most cases, the individually packed products are also sold to consumers separately.

To determine whether collective packaging is a household Multipack (to be declared to Fost Plus) or industrial secondary packaging (to be declared to Valipac), a number of **rules** have been drawn up, with specific criteria among others for drinks, sweets and candy, other consumable products and non-consumable products.

How do you declare your Multipacks?

You can declare your Multipacks via the declaration per base unit. When drawing up a packaging sheet, you indicate the composition and the weight under Multipack.

A few examples

- A pack with 6 bottles of soft drink in a plastic wrapping
- 2 spray cans of shaving cream in plastic film
- Een pak individueel verpakte koeken van 500 g
- 3 packets of crisps in plastic film
- 6 tins of vegetables + 2 free tins that are packed together as a promotion

← [Back to overview 'Multipacks'](#)

Drinks

Wines and spirits

Collectively packaged wines and spirits such as wine, champagne, sparkling wine, cider, aperitifs and brandy are considered to be Multipacks if the number of **consumer units in the collective packaging** ≤ 3 .

Other drinks

Other drinks collectively packaged are considered to be Multipacks if they fulfil the following conditions:

Content	$\geq 1\text{ l}$	$< 1\text{ l}$
Collective packaging is a Multipack if:	the total volume of all the consumer units in the collective packaging $< 10\text{ l}$	the total number of consumer units in the collective packaging ≤ 12
E.g.:	six 1.5 l bottles or eight 1 l drinks cartons	Twelve 33 cl cans

← [Back to overview 'Multipacks'](#)

Sweets, biscuits, chocolate and ice cream

Collective packagings with individually packaged sweets, biscuits, chocolate and ice creams are considered to be Multipacks if the collective packaging fulfils the following conditions:

- Sweets and candy: collective packaging weighs ≤ 1.2 kg
- Biscuits, pastries and candy bars: collective packaging weighs ≤ 1.2 kg
- Chocolate: collective packaging weighs ≤ 600 g
- Ice creams, ice lollies or ice-cream cones: contents amount to ≤ 3 l

Examples

Multipack

- A 1-kg bag of individually wrapped sweets.
- A 500-g pack of individually wrapped biscuits.
- A pack with three individually wrapped chocolate bars.
- A pack with six individually wrapped ice lollies.

Not a Multipack but primary household packaging

- A bag of sweets that are not individually wrapped.

← [Back to overview 'Multipacks'](#)

Content	0,5 l or 0,5 kg and	≥ 0,5 l or 0,5 kg > 0,1 l or 0,1 kg	≤ 0,1 l or 0,1 kg
Collective packaging is a Multipack if the total number of consumer units in the collective packaging	≤ 3	≤ 6	≤ 12
E.g.:	three 500 g packets of coffee wrapped in film	four 250 ml bottles of shampoo wrapped in film	a plastic film containing six 100 g bags of crisps

Other consumable products

Other individually wrapped consumer products are Multipacks if they fulfil the following conditions:

Examples:

Multipack

- Three 500-g packets of coffee in plastic film
- Four 250-ml bottles of shampoo in plastic film
- A plastic film with six 100-g bags of crisps

Examples:

Not Multipacks but primary household packaging

The following individually wrapped products collectively packaged are not sold separately to consumers and are therefore considered to be primary household packaging:

- A box of individually packaged dishwasher tablets
- A box with sachets of instant soup
- A box of teabags
- A box of rice bags
- A box of individually packaged cream cheese
- Four interlinked pots of yoghurt

← [Back to overview 'Multipacks'](#)

Non-consumable products

Collective packages of individually packed non-consumable products are Multipacks if the number of consumer units **in the collective packaging** ≤ 6 .

Examples:

Multipack

- Three boxes of tights in plastic film

Not Multipacks but primary household packaging

- A pack of toilet paper
- A box with 100 tea lights
- Plastic film with 10 packets of paper tissues

Promotional offers

Collectively packaged promotional offers are **always considered to be Multipacks, even if the promotional offer exceeds the limits set in the above-mentioned practical rules.**

Examples:

- A pack with twelve 50-cl bottles of water + three free bottles
- Six 400-ml cans of vegetables + two free cans

Service packaging rules

- 110 How do you fulfil your legal obligations as a producer and/or importer?
- 111 When can you transfer or take over the fulfilment of the legal obligations?
- 111 The mandate
- 112 Mandate management
- 113 Service packaging declarations
- 115 Service packaging decision tree
- 117 Explanation recipients categorie
- 122 Non-exhaustive list

← [Back to overview 'Service packaging'](#)

How do you fulfil your legal obligations as a producer and/or importer?

As a producer and/or importer of service packaging, you can fulfil your legal obligations by joining Fost Plus. You can choose between the following possibilities:

- You can declare all service packaging yourself.
- You can have your customers declare all service packaging.
- You can declare part of the service packaging yourself, while your customers deal with the other part.

Legal responsibility

If an official inspection is carried out, the party responsible for the packaging has to demonstrate that they fulfil their take-back and information obligation. **For service packaging, the legal liability lies with the producers and importers**, irrespective of whether or not the fulfilment of the obligations has been transferred.

Invoicing

No rules are imposed for the invoicing of the Green Dot contributions by the supplier to their customers. The supplier can opt to declare the Green Dot contributions:

- by including a separate line on their invoice or
- by including it in the selling price or
- by not charging their customers.

← [Back to overview 'Service packaging'](#)

When can you transfer or take over the fulfilment of the legal obligations?

The service packaging that is put on the Belgian market is subject to a take-back obligation in Belgium.

It is possible that, as a producer and/or importer, you may not always know whether the packaging that your Belgian customers buy will ultimately be offered to consumers in Belgium as service packaging.

After all, your Belgian customers may:

1. **Export** the service packaging.
2. **Sell** the service packaging to Belgian companies **without being aware of the final destination.**
3. Use the packaging **to produce packed goods in Belgium.**

In cases 1 or 2 you can transfer the declaration to your customer.

In case 3, this does not involve service packaging and the producer of the packaged product is the party responsible for the packaging. There is therefore no need for a mandate in this case.

4. **As a customer of a Belgian producer or importer of service packaging**, you sometimes do not know whether this packaging is intended for consumers in Belgium. In that case, you should also consider transferring the declaration.

The mandate

If you transfer the obligation to submit a declaration, both the principal and the representative have obligations. Both parties have to conclude the 'Mandate for service packaging' with one another. You can download a standard contract in **MyFost**.

← [Back to overview 'Service packaging'](#)

Are you a principal?

AS A PRINCIPAL, YOU TAKE THE FOLLOWING STEPS:

- Join Fost Plus via our online **membership module**.
- **Grant** your customer, the representative, **a mandate** via the 'Mandate for service packaging' contract. **Download this document on MyFost.**
- **Hand your mandates of Fost Plus.**
- **Submit the necessary declarations** to Fost Plus and provide details of your representatives.
- Indicate per delivery and/or invoice sent to the representative which packaging is included in the mandate.

Are you a representative?

AS A REPRESENTATIVE, YOU TAKE THE FOLLOWING STEPS:

- Accept the mandate from your supplier, the principal, via the 'Mandate for service packaging' contract. **Download this on MyFost.**
- **Join Fost Plus** via our online **membership module**.
- **Submit the necessary declarations** to Fost Plus and give details of the suppliers who have given you a mandate.

YOU CAN BE BOTH A PRINCIPAL AND A REPRESENTATIVE:

- **principal:** if you produce and/or import service packaging in Belgium
- **representative:** if you purchase service packaging in Belgium.

Mandate management

Managing mandates calls for constant follow-up throughout the year. The **principal bears responsibility for managing the mandates. This management is extremely important in the exceptional case that the representative does not fulfil its responsibilities. In that case, Fost Plus has to be able to inform the principal of this.**

- As a principal, you manage your mandates online via your declaration in MyFost. You will also find a list of all Fost Plus members on **www.fostplus.be**.

What if a representative defaults?

A representative defaults in the following cases:

- if it does not join Fost Plus.
- if it does not submit a declaration.
- If it does not pay its invoices to Fost Plus.

Fost Plus informs the principal of this. After all, if the representative defaults, the principal will have to terminate the mandate and take care of the declaration itself.

[← Back to overview 'Service packaging'](#)

Service packaging declarations

Service packaging declarations

If you only declare service packaging, you use the simplified declaration for service packaging.

PRINCIPLES

In conjunction with the relevant professional federations, Fost Plus has developed a declaration system that simply involves providing information per packaging material and therefore not per individual service packaging unit.

HOW DO YOU FILL IN YOUR DECLARATION?

- Determine per packaging material how many kilograms you have to include in your own declaration.

This concerns all service packaging that you put on the Belgian market, for which you have not given your customers a mandate and:

- that you produce in Belgium or
 - that you import directly into Belgium or
 - for which you have received a mandate from your Belgian supplier.
- If you have granted and/or received at least one mandate for service packaging, then you should include the data on this mandate in your declaration.

HOW DO YOU FILL IN THE MANDATES?

A distinction should be made between the mandates that you have granted and the ones you have received.

For the mandates that you have granted, fill in the 'Given mandates' section. You enter the details of your clients and the weight delivered per packaging material, per client.

For the mandates that you have received, under 'Received mandates' you enter the details of your suppliers and the weight received per packaging material, per supplier.

← [Back to overview 'Service packaging'](#)

Declaration of service and other packaging

If you declare other packaging as well as service packaging, you should choose from among the following declaration systems:

- Detailed declaration for the service and the other packaging.
- Declaration of the service packaging via the simplified 'service packaging declaration' and 'detailed declaration' for the other packaging.
- Declaration of the service packaging via the simplified 'service packaging declaration' system and 'fixed-price declaration' for the other packaging.
- 'Turnover declaration' for all packaging, including service packaging. This is only possible if all the packaging is included in the reference declaration. This declaration type is only possible as of the second declaration.

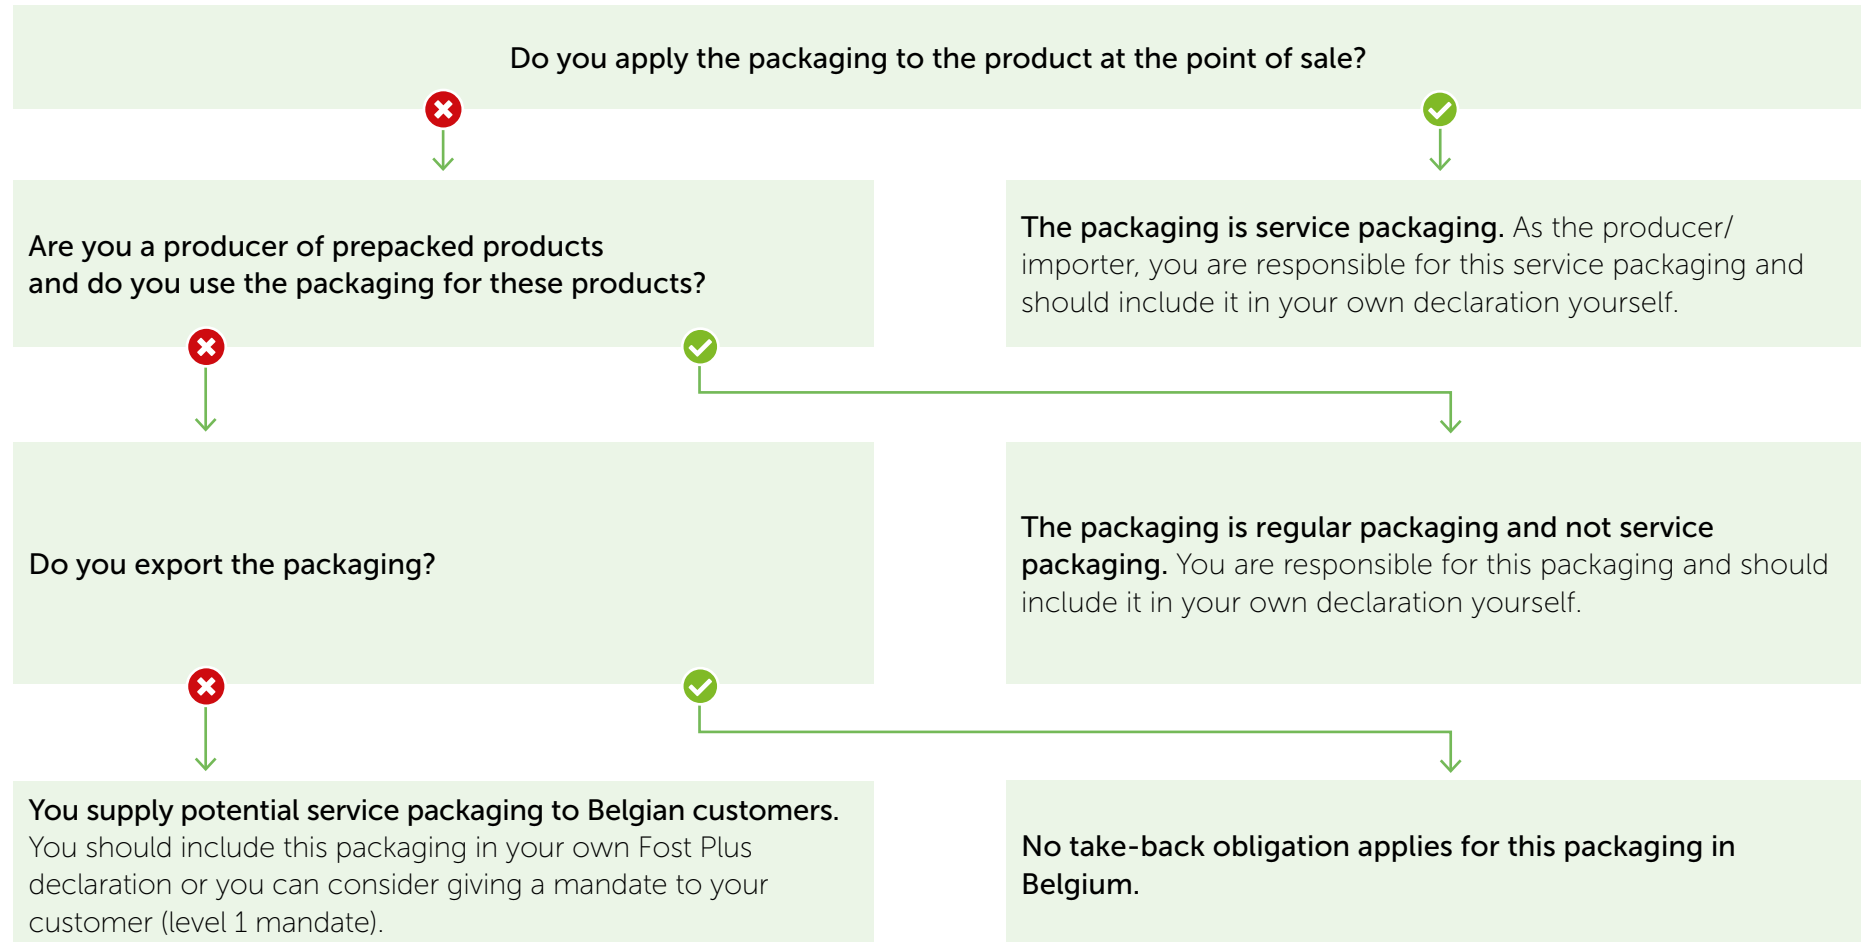

N.B.: carrier bags are service packaging but may only be declared via the 'Carrier bags' declaration

[← Back to overview 'Service packaging'](#)

Service packaging decision tree

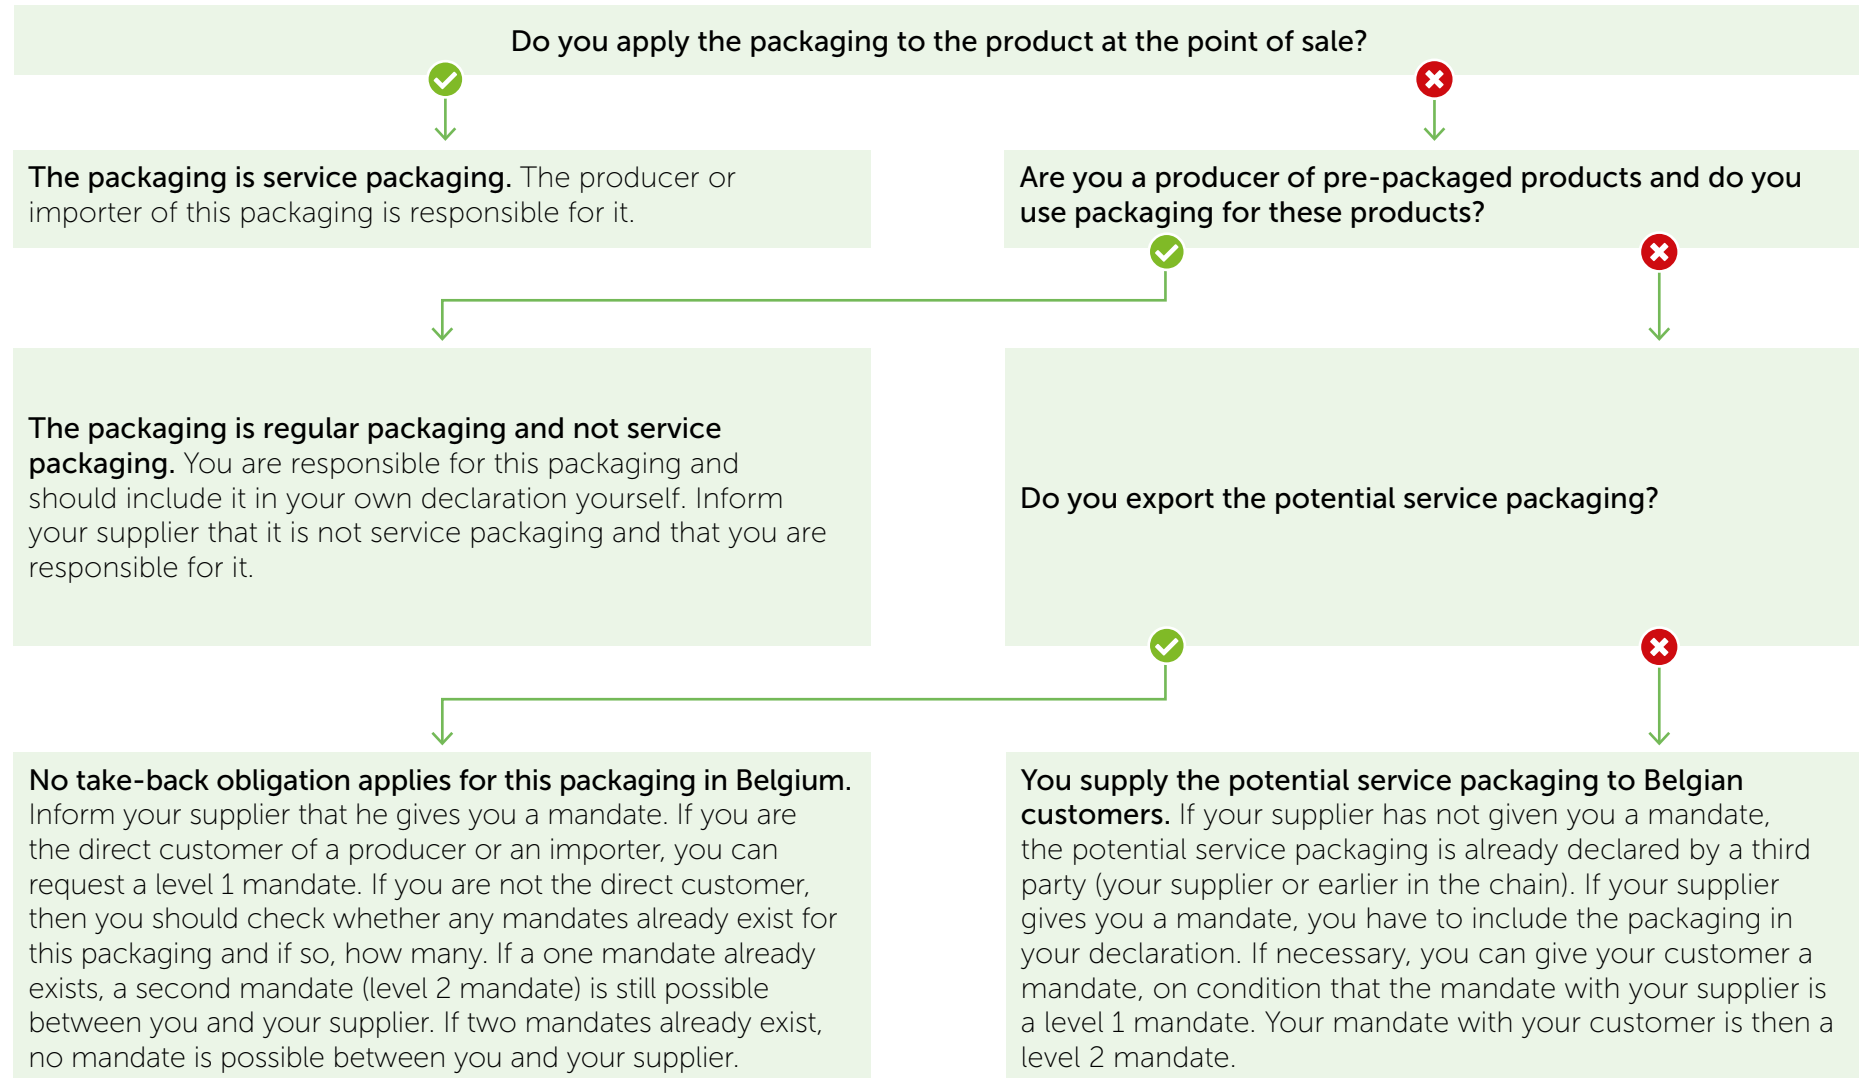

This decision tree should be used separately for each packaging.

PART 1: You are the producer or importer of the packaging

[← Back to overview 'Service packaging'](#)

PART 2: You purchase the packaging from a supplier in Belgium

← [Back to overview 'Service packaging'](#)

Explanation recipients categories

Recipients that are intended to be used as a product.

RECIPIENTS THAT ARE INTENDED TO BE FILLED BY HOUSEHOLDS

Certain recipients are intended to be filled by households. In that case, the recipients are not packaging. After all, they are not intended to surround, protect, ship, deliver and/or offer goods along the path from producer to user or consumer. Their intended use by households can be seen from the fact that they are sold in small quantities or from the typical consumer packaging of these recipients. Consumer packaging often contains information intended for the consumer. This may be the number of units, the name of the producer, the brand name, the price, etc.

As these recipients are not packaging, the cooperation agreement does not apply to them. The consumer packaging around the recipients is, however, packaging subject to the take-back obligation.

Examples:

- Aluminium trays sold in tens.
- Disposable cups packed in groups of 10 in consumer packaging.
- A roll of freezer bags sold in a typical consumer packaging.

Counterexample:

- Empty bowls for snacks or cups packed in groups of 500, even if they are sold in stores. Large volumes are not intended for households, but for professionals such as chip shops and snack bars.

← [Back to overview 'Service packaging'](#)

RECIPIENTS THAT ARE INTENDED TO BE USED BY COMPANIES AS A PRODUCT.

Companies and institutions such as schools, hospitals, nursing homes, OCMW/CPAS welfare facilities and prisons can use a recipient for a purpose other than packaging. These are recipients used in companies where the intention is not to put a product on the market and there is no 'packaging-product' couple.

Examples:

- Aluminium trays used in laboratories.
- Disposable cups provided for staff in an office when no specific product is offered.
- Disposable plates and cups used for patients' meals.

As this is not packaging, the cooperation agreement does not apply to them.

Counterexamples:

- Catering companies that supply to and/or run kitchens/canteens in companies and institutions, such as schools, hospitals, nursing homes, OCMW/CPAS welfare facilities and prisons or that supply private individuals, intend to put products on the market. The party responsible for packaging for the recipients used depends on the way in which the recipient is filled (see page 115).
- Recipients used in dispensing machines (for example disposable cups and the packaging of the products on offer).

← [Back to overview 'Service packaging'](#)

Recipients that are intended to be filled on a packaging line.

Recipients that are intended to be filled on a packaging line to put pre-packed household products on the market are packaging but not service packaging.

The responsibility for this packaging lies with the party that packages the products in Belgium (packaging responsibility type A).

This packaging usually contains commercial and other information about the packaged product, such as the producer, the product name and/or the brand, the ingredients, the weight, the volume and/or the number of items.

Examples:

- Cardboard packaging in which frozen goods are packed, such as pizza boxes bearing the name of the producer as well as the ingredients and the weight of the pizza.
- Plastic bowls for processed meats, bearing the name of the producer, the type of processed meat, the brand and the weight of the product.
- Bags that are sealed before they reach the store, such as a plastic bag of potatoes.

Recipients that are intended to be filled at the point of sale.

Recipients that are intended to be filled manually at the point where they are provided for consumers of goods or services are service packaging. Belgian producers and/or importers of service packaging are responsible for the packaging (packaging responsibility type D).

The term 'the point where they are provided for consumers' should be interpreted broadly here and covers not only traditional points of sale (such as butchers and bakers), but also stands (such as hamburger and flower stands), trade fairs, dispensers and canteens.

Examples:

- Checkout bags.
- Plastic pots for processed meats at the butcher's.
- Bread bags.

← [Back to overview 'Service packaging'](#)

Specific regulations for carrier bags, napkins, disposable plates and cups

CARRIER BAGS

There are three types of carrier bags:

- one-way carrier bags,
- reusable carrier bags and
- bags that are not packaging

One-way carrier bags are bags designed for one-time use. It concerns packaging for which both the take-back obligation and information obligation applies.

Reusable carrier bags are bags that are designed to be reused for the same purpose and purpose and for which a system exists system to exchange the worn out carrier bags exchange. It concerns packaging for which the take-back obligation does not apply, but the information obligation applies.

Carrier bags that are not packaging.

Carrier bags made of sturdy material, which are designed to be reused almost indefinitely for the same or another purpose and for which there is consequently no system of exchangeability, are not packaging. Possible examples are: carrier bags made of nylon, cotton, jute, straw woven (artificial) fabric. For this type of carrier bag is not subject to a take-back nor information obligation, as it does not concern about packaging.

NAPKINS

Napkins are considered to be a product, not packaging. Napkins intended for fast-food restaurants, self-service businesses, company canteens, bakers, chip shops, etc. are usually offered to customers separately. In a minority of cases, the napkin is used to package something which is offered to the customer packaged.

N.B.:

Does your company put carrier bags on the market? If so, then as of the 2021 declaration year, you have to declare this via the new declaration specifically for carrier bags. Carrier bags used to be declared via the service packaging declaration or the detailed declaration. So when submitting your declaration, take care not to declare your carrier bags twice!

[← Back to overview 'Service packaging'](#)

DISPOSABLE PLATES AND CUPS

Disposable plates and cups can be subdivided on the basis of their appearance and intended use.

Appearance

Disposable plates and cups that bear a brand name and/or product or company logo referring to a product that is offered on the plate or in the cup are service packaging.

Disposable plates and cups with a company logo or name that does not refer to the consumer product offered on the plate or in the cup are not service packaging, unless specific provisions are made as regards the intended use (see Intended use).

Disposable cups that do not bear a name, logo or brand are not service packaging, unless specific provisions apply with regard to intended use (see Intended use).

Intended use

Disposable plates and cups that are used among other things at festivals, concerts, trade fairs, on trains, in cinemas, fast-food restaurants, chip shops, aeroplanes, etc. to put products on the market there, are service packaging.

Disposable cups used in dispensers are service packaging.

[← Back to overview 'Service packaging'](#)

E-commerce and packaging responsibility

1. Scope

This memo offers you an analysis of the packaging responsibility for the packaging that is released on the Belgian market as a result of e-commerce activities in Belgium to **individuals**. In the event that the Belgian customer is a **company** with a Belgian company registration number, the usual rules of packaging responsibility apply, not the rules of this memo. The aim is to establish assessment criteria that identify the packaging responsibility within e-commerce to Belgian individuals (see point 3.2).

- 124 Scope
- 125 Context
- 128 Assessment of the packaging responsibility
- 131 Schematic overview of assessment criteria

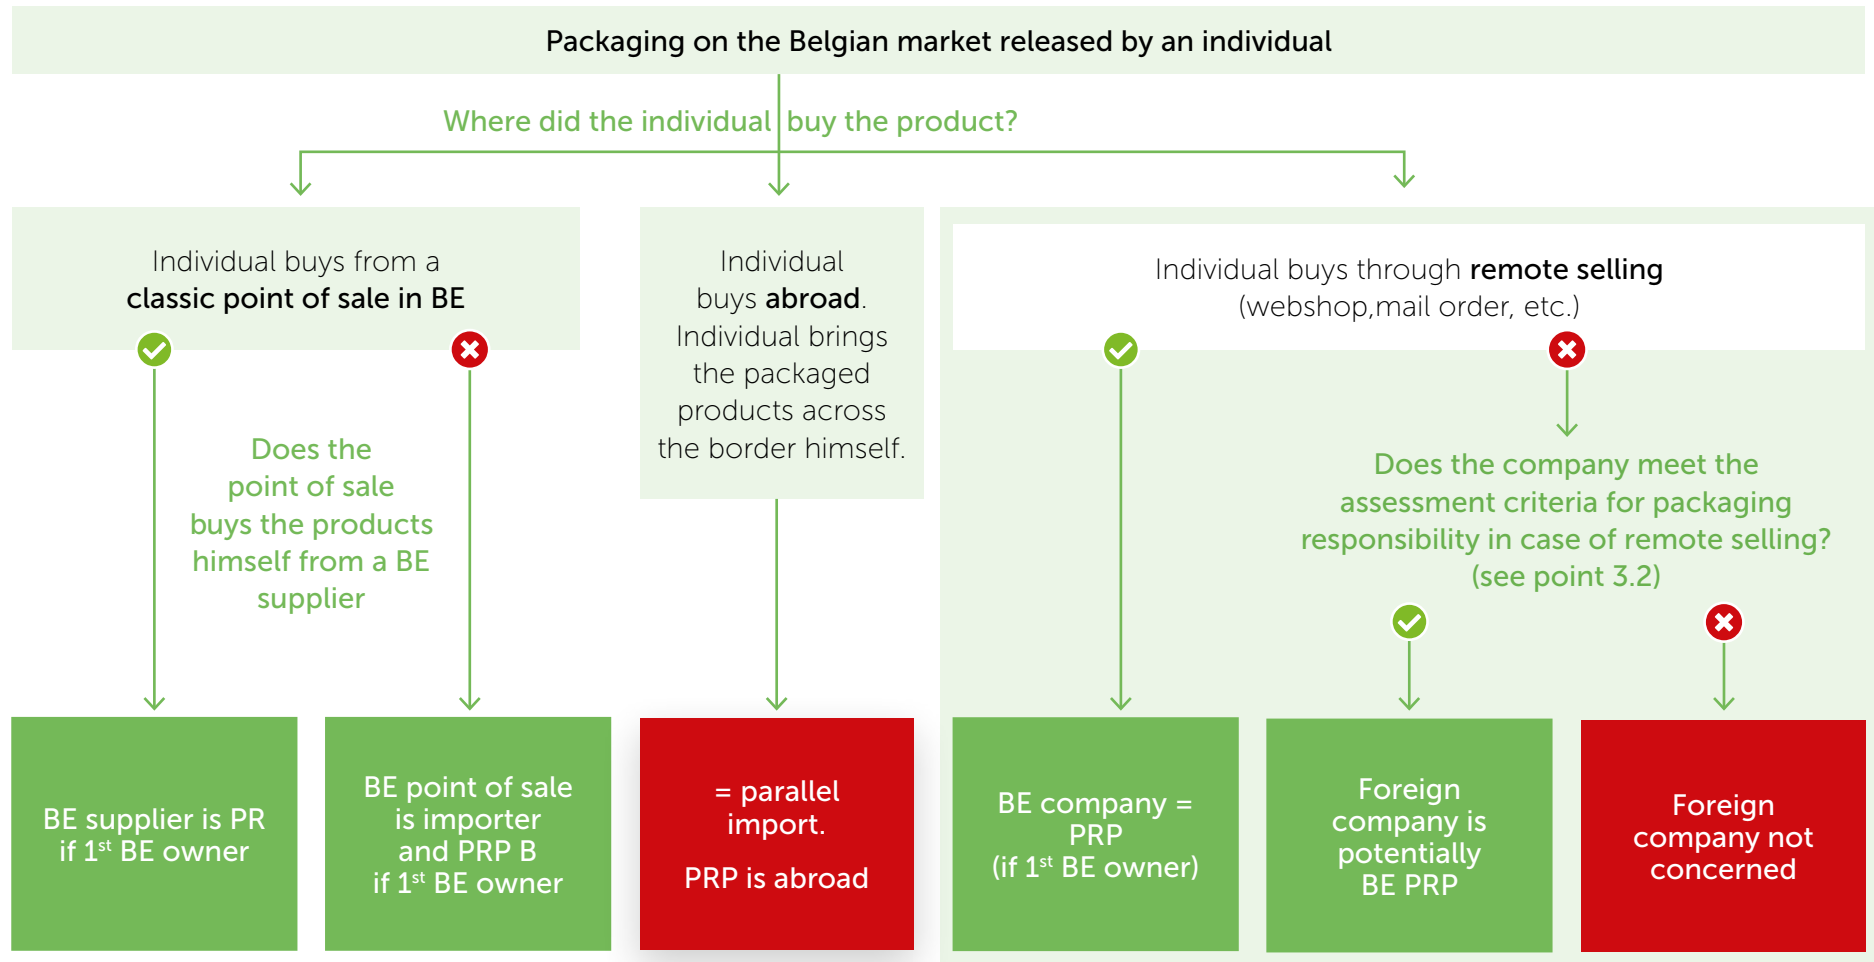

[← Back to overview 'Packaging responsibility e-commerce'](#)

Below you will find a schematic overview of the scope of the memo.

Finally, at the end you will find a schematic presentation of the assessment criteria that maps the process for identifying the party responsible for packaging.

schematic overview of the scope of the memo

PRP=party responsible for packaging

[← Back to overview 'Packaging responsibility e-commerce'](#)

2. Context

The growing popularity of e-commerce raises questions about the packaging responsibility associated with the online sale of household and industrial products.

Today, e-commerce companies based abroad often still avoid their packaging responsibility because they interpret the existing legal framework too restrictively. Article 2, 20°, b) of the Cooperation Agreement of 4 November 2008 on the prevention and management of packaging waste ("CA") defines the "party responsible for packaging" as follows:

"b) where products released on the Belgian market have not been packaged in Belgium, any party importing the packaged goods (or that has them imported) and that does not unpack them or use them itself".

If an overly restrictive interpretation of Article 2, 20°, b) CA is applied, e-commerce companies based abroad that sell or offer for sale and deliver household or industrial products via the internet in Belgium would not have any packaging responsibility.

The Explanatory Memorandum to the CA nevertheless specifies that the legislator kept in mind at all times that "one and only one party responsible for packaging" must be designated for each packaging. Where imports are concerned, the Explanatory Memorandum to the CA states that, when a foreign company conducts its sales activities on Belgian territory, this foreign company is the party responsible for packaging, not the Belgian customer. Door-to-door selling and sales at fairs and exhibitions are cited as examples. A company based abroad that sells or offers and delivers household or industrial products via the internet in Belgium fits this picture perfectly.

← [Back to overview 'Packaging responsibility e-commerce'](#)

The basic question is therefore whether the e-commerce company is conducting commercial activities on Belgian territory. This will determine the packaging responsibility.

This is an application of the principle whereby those who are responsible for releasing packaging onto the Belgian market must also be ultimately responsible for the costs associated with the obligation to take their packaging back. Ruling differently in this regard would be contrary to the Cooperation Agreement and constitute:

- an unfair trading practice because of unfair competition, since e-commerce companies based abroad would not be responsible for financing the obligation to take back their packaging that is released onto the Belgian market, while companies based in Belgium that are active offline/online in remote selling as a result of which packaging is released onto the Belgian market do so.
- discriminatory treatment, since similar situations would be treated unequally within the category of "remote selling" because e-commerce companies based abroad would not be responsible for financing the obligation to take back their packaging that is released onto the Belgian market, while other foreign companies active in remote selling (such as mail-order companies) that release packaging onto the Belgian market do so.

[← Back to overview 'Packaging responsibility e-commerce'](#)

3. Assessment of the packaging responsibility

3.1. Introduction

Below follows an overview of the assessment criteria that should be used to check whether a company active in e-commerce for Belgian private individuals as a result of which packaging comes onto the Belgian market, is subject to packaging responsibility as provided for in Article 2, 20°, b) SA.

The establishment of any responsibility for packaging for packaging that comes onto the Belgian market via e-commerce must always be assessed on a case-by-case basis.

3.2. Assessment criteria

3.2.1. E-commerce to Belgian private customers occurs whereby packaging is put on the Belgian market.

The website concerned makes a remote sale to a Belgian consumer, whereby household and/or industrial packaging is put on the Belgian market.

3.2.2. Belgian business number.

If the e-commerce company has a Belgian business number, it may be deduced from this that the e-commerce company develops commercial activities on Belgian territory. There are strong grounds for presumption.

A Belgian business number is understood to mean the number under which the company is registered in the Kruispuntbank van Ondernemingen/Banque Carrefour des entreprises – the central data base.

The business number can usually be found on invoices, order confirmations and/or purchase documents relating to the goods or the service provided by the e-commerce company.

A distinction may be made among various cases in companies with a Belgian business number:

- Belgian company;
- foreign company with address in Belgium;

- foreign company without address in Belgium.

3.2.2.1. Belgian company.

This refers to e-commerce companies with their registered office in Belgium. These companies should be considered to be parties responsible for packaging.

3.2.2.2. Foreign company with address in Belgium

Here we need to look further at whether it is:

- a foreign company with a branch or a site in Belgium. If the e-commerce company is a foreign business and has a branch or a site with an address in Belgium, then the latter should be considered to be responsible for packaging.
- a foreign company with a representation or a liaison office in Belgium. If the e-commerce company is a foreign business but has a representation office in Belgium, a strong presumption arises that the e-commerce company exercises commercial activities on Belgian territory and is therefore

← [Back to overview 'Packaging responsibility e-commerce'](#)

responsible for packaging. This presumption is further backed up by the presence of other elements indicated as from point 3.2.3.1, but can, conversely, be refuted by the total absence of such elements.

3.2.2.3. Foreign company without address in Belgium

If the e-commerce company is a foreign business without an address in Belgium, but with a Belgian business number, a strong presumption still arises that the e-commerce company exercises commercial activities on Belgian territory and is therefore responsible for packaging. This presumption is further backed up by the presence of other elements indicated as from point 3.2.3.1, but can, conversely, be refuted by the total absence of such elements.

3.2.3. No Belgian business number

If the e-commerce company does not have a Belgian business number, a check must be made to see whether this foreign company develops commercial activities on Belgian territory.

3.2.3.1. There is a Belgian domain name extension: extension '.be' or other exclusively Belgian domain name extensions

Having a domain name extension '.be' or another exclusively Belgian domain name extension creates a strong presumption that the website concerned targets the Belgian market and that it therefore develops commercial activities there and must consequently be considered to be the party responsible for packaging. This also applies when the website with a Belgian domain name extension redirects to a website with a foreign domain name extension on which the actual sale takes place.

3.2.3.2. A non-country-related extension is used ('.com', '.eu', '.org', etc.)

If a non-country-related extension is used ('.com', '.eu', '.org', etc.), but the website specifically targets the Belgian market/consumers, the presumption also arises that the website concerned targets Belgian consumers/the Belgian market and that the e-commerce company therefore develops commercial activities on Belgian territory.

This mainly involves communication and promotion directed at the Belgian market/consumers, such as:

- Advertising directed specifically at the Belgian market/consumers;
- Reference to a Belgian contact address/telephone number/fax number;
- The country preference that has to be set on the website refers to Belgium;
- The product range available for sale is clearly geared to the Belgian market.

If a non-country-related extension is used ('.com', '.eu', '.org', etc.), whereby the website does not expressly target the Belgian market/consumers, there is no direct presumption that the e-commerce company develops commercial activities on Belgian territory. However, other indicators may also suggest that the website targets the Belgian market/consumer (see point 3.2.4).

3.2.3.3. There is a foreign domain name extension ('.nl', '.fr', '.de', etc.)

There is no direct presumption that the e-commerce company develops commercial activities on Belgian territory. However, other indicators may also suggest that the website targets the Belgian market/consumer (see point 3.2.4).

3.2.4. Other indicators

If it cannot be presumed that the e-commerce company develops commercial activities on Belgian territory on the basis of points 3.2.3.2 and 3.2.3.3, it may be deduced from one or more of the following indicators that the website targets the Belgian market/consumer.

3.2.4.1. Communication and promotion

The means of communication and promotion used by the e-commerce company may be an indication that it develops commercial activities on Belgian territory, for example:

- Any form of advertising directed specifically at the Belgian market/consumers;
- Reference to a Belgian contact address/ telephone number/fax number;
- The country preference that has to be set on the website refers to Belgium;
- The language preferences are at least two of the three official languages in Belgium;

- The product range for sale is clearly geared to the Belgian market;
- The terms and conditions of payment show that the sales activities are geared to the Belgian market.

3.2.4.2. Payment into a Belgian account number

If payment is made into a Belgian account number, this is a clear indication that the e-commerce company develops commercial activities on Belgian territory.

3.2.4.3 General and/or special terms and conditions of sale

The general and/or special terms and conditions of sale of the e-commerce company indicate that Belgian law applies and the Belgian courts and tribunals have jurisdiction over relations between the company and third parties. This is a clear indication that the e-commerce company develops commercial activities on Belgian territory.

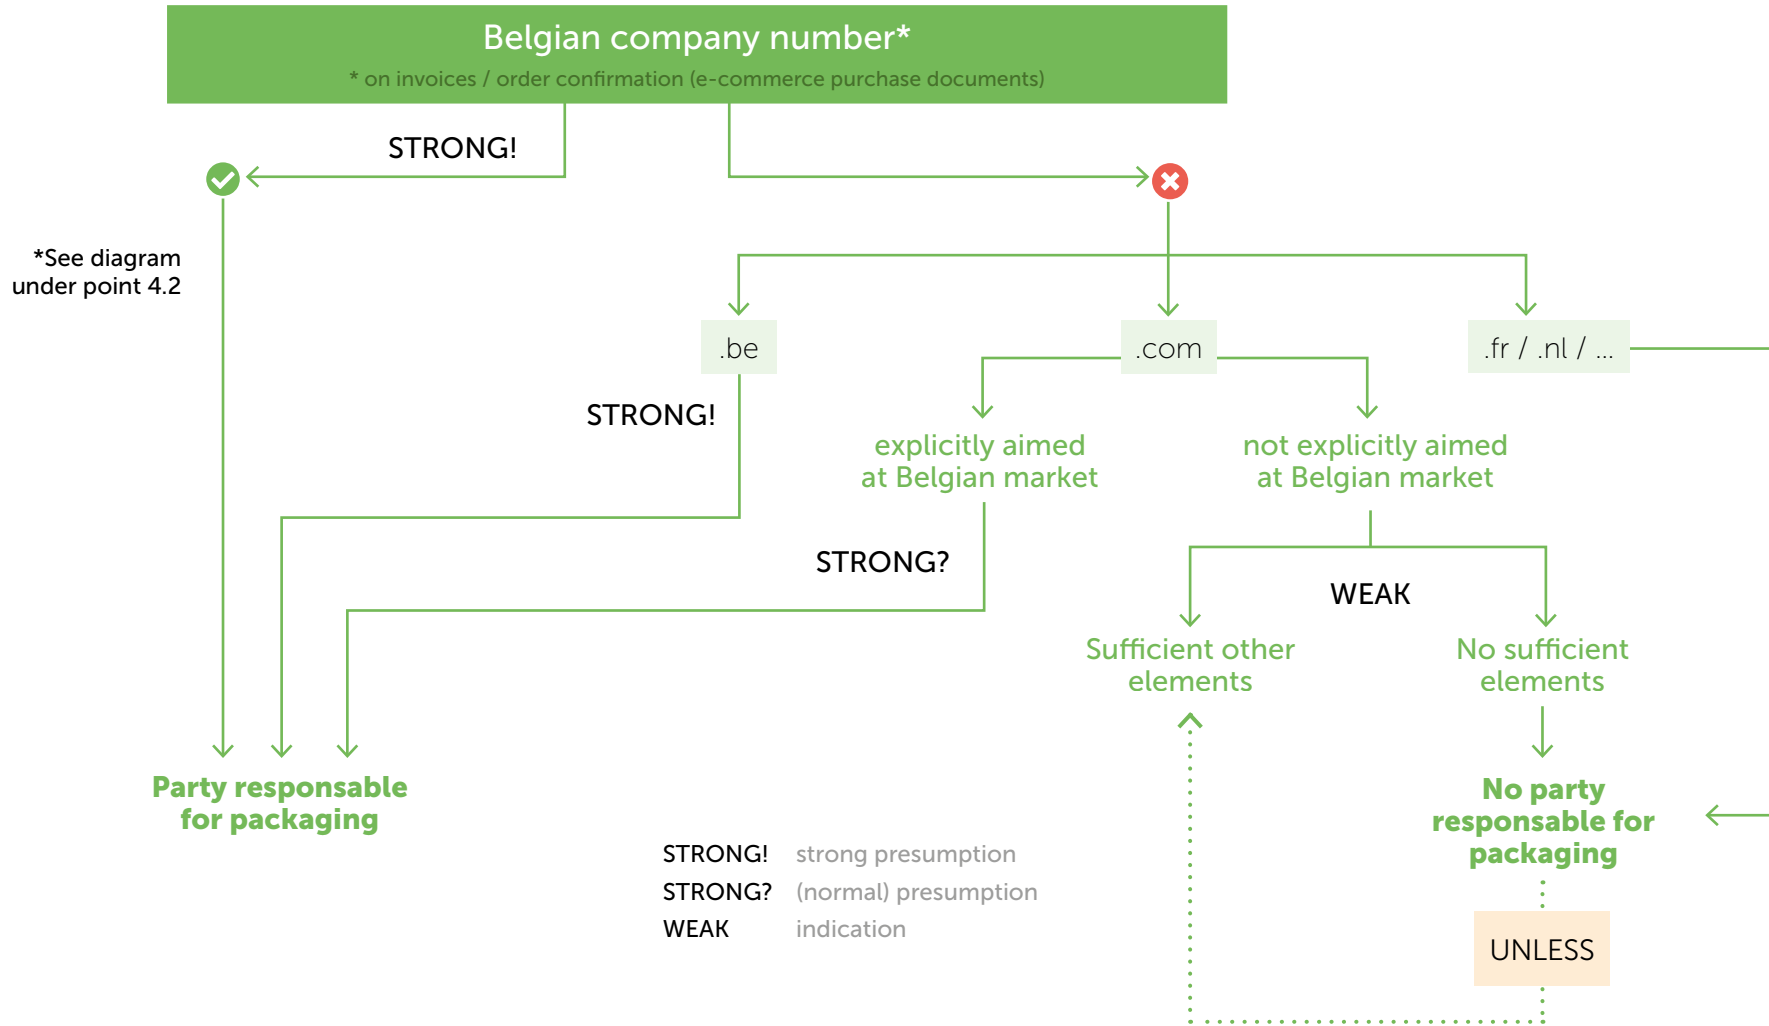

3.2.4.4. Delivery in Belgium

The fact that Belgium is added to the list (on the website) of countries to which deliveries can be made may be an indication that the e-commerce company develops commercial activities on Belgian territory, but this element alone is not sufficient to reach this conclusion. Other indications are therefore also required.
